December 2017

ALUMNI MANAGEMENT SYSTEM FOR WEERAKETIYA RAJAPAKSHA CENTRAL COLLEGE

P.D. Gunasekara

BIT Registration No: R092306

Index No: 0923062

Name of the supervisor: Ms. C.E.J. Jayasooriya

December 2017

This dissertation is submitted in partial fulfilment of the requirement of the Degree of Bachelor of Information Technology (external) of the University of Colombo School of Computing

DECLARATION

"I certify that this dissertation does not incorporate, without acknowledgement, any material previously submitted for a degree or diploma in any university and to the best of my knowledge and belief, it does not contain any material previously published or written by another person or myself except where due reference is made in the text. I also hereby give consent for my dissertation, if accepted, to be made available for photocopying and for interlibrary loans, and for the title and abstract to be made available to outside organizations."

ABSTRACT

The past pupils of Weeraketiya Rajapaksha College are spread all over Sri Lanka. Many of them have splendid accomplishments in their personal and professional fields bringing laurels to their Alma Mater. The Past Pupils' Association of Weeraketiya Rajapaksha College was formed to strengthen the ties between the past pupils and to facilitate the development of the school.

As the number of memberships grow larger the administration of association get complex and also the communication channels get less. So this project aims at developing a user friendly dynamic website for past pupils to have a place to share information, make donations, purchase tickets, online membership registration and view upcoming events & latest news. Further project emphasize on implementing a web application for the association to manage memberships, scholarships, donations and events. The Rational Unified Process model was used during the lifecycle of development and the system has been implemented using the technologies PHP and MYSQL.

The system had been implemented to fulfill the clients' requirements. The system was tested by some representatives and finally the system was delivered to the association. The committee and the members of the association have positive attitudes towards the system as it has ease their alumni management process.

ACKNOWLEDGMENT

I would like to extend my gratitude to many people who helped to bring this project to fruition. First and foremost I wish to thank my supervisor, Ms.C.I.E.Jayasooriya. I am so deeply grateful for her help, professionalism and valuable guidance throughout this project.

I would like to specially thank Mr.Nandisena Wijethunga, former president of Past Pupils' Friendship Association of Weeraketiya Rajapaksha Central College for sparing his valuable time to give the necessary information and for providing guidance throughout the project.

My thanks also goes to Mr.Daminda Herath for helping me with various aspects of implementing this system.

Finally, I must express my profound gratitude to my sister Ms. N.D. Gunaseakara and family for providing me with unfailing support and continuous encouragement throughout my years of study. This accomplishment would not have been possible without them. Thank you.

INTRODUCTION CHAPTER 1

1.1 GENERAL INTRODUCTION

Alumni are one of the most important assets to the school as they are the people who represent the school in the real world. Alumni forms associations to promote a spirit of unity and loyalty among former students and to strengthen the ties between alumni, the community, and the school. These associations gained added importance in the development of the school because of their enormous outreach potential that benefits the school and helps current students in their career paths.

Past Pupils' Friendship Association of Weeraketiya Rajapaksha Central College is one of the strongest alumni associations among the rest in Sri Lanka. It was formed in 1990, 50 years after the school was established. It was formed with the aim of developing and sustaining friendship and brotherhood among past pupils and teachers of the college and to facilitate the development of the school and the students while serving the community at large. Most alumni members are leading professionals spread across the country and worldwide .With more than three hundred members alumni association is working toward achieving the objectives such as building team strength, developing friendship and brotherhood among the membership, facilitating the upgrading of the college academic, extra-curricular activities and infrastructure etc. The alumni association provides a channel for professional and social communication between the past pupils themselves and the school.

1.2 MOTIVATION FOR THE PROJECT

Currently the alumni association is maintaining, updating and managing records manually. This does not allow efficient data management and retrieval process. It is a tough task to communicate with members for renewals, events, meetings etc. The past pupils who are interested in joining the alumni has to contact alumni committee member to get an alumni form, fill-up the form and submit back to complete the registration process. Some of them think the process to become an alumni member is inconvenient. Thus the committee needs an easy comprehensive system to manage the day to day aspects of the association. Further they expect to connect and interact with members, grow and retain the membership, increase participation in events through the new system.

1.2.1 DRAWBACKS IN THE CURRENT PROCESS

Lack of an accurate and homogeneous database of the school's alumni

Alumni records over the history of the school have been maintained in a variety of methods. Once the student had graduated the records were archived, thus making access to these records difficult and time consuming.

• Limitations in expanding the membership

As the members have to submit the membership forms by hand most past pupils are reluctant to get the association membership. There is geographic limitation in developing international alumni relations and get the membership of overseas alumni.

Conventional process for communication

Communication is critical for the association to inform members and others about its goals, activities and motivate them to take an interest in the association and the school. In the conventional process the alumni are informed about membership renewals, meetings and events by sending individual letters through mail. This method is time consuming, costly and the response rate is low.

• Outdated information in the current static website

The existing website provide information only about the school through one-way communication and it has little room for future activities and interaction between the members. The members have no or slight chances to join in decision making process by giving their feedback to align services with existing and emerging needs.

1.2.2 NECESSITY FOR AN ALUMNI SYSTEM

• Get the support of the alumni for the development of the school

The government support for educational activities is lessening. As a result, the schools need to secure alternative sources of cash inflow. It is beneficial to the school to maintain healthy relationships with the alumni who have the financial solvency to

donate to their school. Hence, a web based system expands the possibilities of obtaining monetary gifts.

• Open career paths to the current students

The alumni can provide assistance to the current students for their future progress. The students should have a source to get contact information of the alumni and the alumni association should have a media to communicate with the current students regarding job fairs, seminars and job opportunities.

• School's need to highlight itself as a leading school within the province

With the achievements of the students the school has managed to reach high stands provincially and nationally. That will be enriched with publicizing notable alumni in leading professions within the country and worldwide.

1.3 OBJECTIVES OF THE SYSTEM

The proposed system is intended to meet the following objectives:

- Maintain the updated and current information of all alumni
- Encourage, foster and promote close relations between the school and the alumni and among the alumni themselves
- Encourage the alumni to support and participate in programs, services and events of the association.
- Obtain feedback and opinions from alumni for planning and implementing the activities of the association.
- Provide a contemporary centralized base of information that is easy to use by alumni committee members.
- Provide efficient standard reporting and ad hoc reporting capabilities

1.4 SCOPE OF THE PROJECT

Create a user friendly dynamic website for past pupils of Weeraketiya Rajapaksha Central College to have a place to share information, make donations, purchase tickets, online membership registration and list upcoming events & latest news. Implement a web application for the association to manage memberships, donations, scholarships and events.

1.5 STRUCTURE OF THE DISSERTATION

Information on the project carried out is given in a comprehensive manner in the following chapters.

Chapter 2 - Discusses the requirements and brings out a requirement analysis with the details of currently available software.

Chapter 3 - This chapter includes System designing, presenting overall structure of the system

Chapter 4 - 'Implementation Chapter' is the core part of the project. It includes important code segments and module structures.

Chapter 5 - Test plans which ensure the system would work properly.

Chapter 6 - The conclusion and discusses results of the project. Describes future work based on this specific project.

ANALYSIS

CHAPTER 2

2.1 INTRODUCTION

The software requirements are description of features and functionalities of the target system. Requirements convey the expectations of users from the software product. The requirements can be obvious or hidden, known or unknown, expected or unexpected from client's point of view [1]. Requirement analysis helps to study the nature of the present situation and it gives a clear picture of the existing process and the weaknesses associated with the current practices. Requirement gathering was performed through two areas; interviews and studying documentation.

2.2 REQUIRMENT GATHERING TECHNIQUES

Collecting requirements is a tedious task. Wrong or incomplete requirements lead into incomplete product that will result in customer dissatisfaction. A proper methodical approach will help to gather user needs completely.

Interviews commenced with the President of the association from the beginning of the project. The President had a general idea of what he wanted the system to do and he explained the current manual system the association is following. The functionalities in the proposed system was verified with him. The initial interviews were lasted approximately two hours. Secretary, treasurer and some of the committee members were interviewed to get an idea about what they are expecting through the new system. Document review technique is an effective data collection method as it is a relatively low cost method which provides spontaneous data The documents were reviewed to ensure that the proposed system obtain the required data. Some of the important documents are member registration form, scholarship forms, event budgets etc.

2.3 CURRENT PROCESS

After a domain analysis major activities of the association has been identified as Member Registration, Donation Management, Scholarship Management and Event Management. A detailed study had been carried out to get a deep understanding of each process.

MEMBER MANAGEMENT

If a past pupil of the college wishes to join the association he has to fill a form which should be signed by a proposer who is currently a member of the association. Then he pays the membership fee to a bank and submits the filled form along with the bank slip. The treasurer verifies the payment details, President or the Secretary gives his/her consent. At the end a membership ID is assigned to the new member. The members have to renew the membership at the end of one year period.

DONATION MANAGEMENT

The members of the association and also the non-members can donate to the association. Association looks for donations under the categories; school event, association event, scholarship, welfare of the association. Also association has welfare shop which sell gifts items.

In school event category association ask donations for school projects and school events. The association hand over the collected donations to the school. The members can contribute for association events also. The association expects donations for welfare of the association. They are used as benevolent fund, for alms giving, funerals and etc.

The use case diagram is a high level description of how the users interact with the system. The diagram in figure 2.1 is a use case diagram of the donation management module.

Figure 2.1 Use Case Diagram; Donation Management

SCHOLARSHIP MANAGEMENT

Association offer scholarships to students who have demonstrated outstanding academic performance in the school. Students are selected from those got university entrance in last year that have financial difficulties. Annually students who prefer to get the scholarship submit the application form and the scholarship committee chooses the beneficiaries through a predetermined selection criteria. Members as well as non-members can sponsor for these students for scholarships.

EVENT MANAGEMENT

The association organizes events such as musical events, annual trips, friendship cricket match, etc. The secretary assigns members for the tasks. The treasure prepares a budget plan for which he gets the approval from committee. The members can participate for any event and for some events such as annual trip they have to pay an advance to confirm participation. Event committee is responsible for informing members, plan the process,

gather resources, and sell tickets to success the event. At the end of the event the committee publish the budget and other details for members to refer.

The current process is well depicted by figure 2.2 use case diagram.

Figure 2.2: Use Case Diagram of the existing system

2.4 SIMILAR ALUMNI MANAGEMENT SYSTEMS

To be familiarize with the system to be implemented, similar alumni management systems had been studied. There are many commercial alumni management software but there are only few free software that can be used for alumni management but they are actually implemented for membership management.

WILD APRICOT

Wild Apricot is a web based membership management software which maintains a membership database. Auto membership renewal, fund raising and event management

are some of the features which had been integrated to this system. The software if free for one admin and up to 50 members, if the organization is bigger than have to upgrade for a paid version [2].

GRADUWAY

Graduway is a commercial software which provides many features such as membership management, event management, fund raising management and mailing list management. It is a cloud based platform which can be customized for different types of institutions. The institutes can register through Facebook or LinkedIn account. The starting price of the product is \$5,000.00 per a year [3].

2.5 FUNCTIONAL REQUIREMENTS

Functional requirements are associated with specific functions, tasks or behaviors the system must fully support [4]. A functional requirement relates directly to a process the system has to perform or information it needs to contain [1]. Following are the functional requirements identified by the analysis.

MEMBER MANAGEMENT MODULE

The past pupils should be able to get the membership online. The executive members should get the privileges to authorize the registration. The system must maintain the membership details as well as pending membership details. The system must generate mail/ SMS to notify the past pupil and the executive members about registration request, registration completion and registration rejection. Members should able to renew the membership once a year. The executive members should be able to get summaries of member registration, membership income etc. The members should be able update their profiles and view profiles of other members.

DONATION MANAGEMENT MODULE

Donations can be made to one of several funds; example funds are the College's General Fund, the Scholarship Fund, and CSR Fund etc. The donors should be able to view the donations required and he should be able to donate online. The donors receive appreciations, requests and remainders through mail. The president should be notified about donations made. The executive members should be able to get list of donors, donation income etc.

SCHOLARSHIP MANAGEMENT MODULE

The students in need of scholarships, should be able submit their details online. The committee should be able to select students through the system and the eligible students should receive notifications. When the scholarships are awarded those details should be available to members through the system. Donation request report, eligibility list, scoring reports, donation history report should be generated from the system.

EVENT MANAGEMENT MODULE

All the users of the web site should be able to view the events. The users who have permission should be able to register for an event and confirm the participation. The system should facilitate the event committee to organize the event by providing a budget planner, a communication channel and a task manager. The system should be able to track attendance of participants. The members should be notified about events through an SMS or a mail. The participants should be able to buy the tickets for the events through the system.

WEB SITE

The association needs a web site which presents information about the association, latest news, upcoming events and photographs of events. Moreover the members should be able to share their school time experiences through the site. An e shop should be there for online purchasing of car stickers, t shirts etc. Online ticketing facility should be there for buying event tickets online.

2.6 NON FUNCTIONAL REQUIREMENTS

Non functional requirements are the constraints the system must work within.

SECURITY

The system facilitates to create users with specific rights for the application usage. The system must maintain the privacy of the users by maintaining their personal information inaccessible to others. Physical access to the computer storing the past pupil database shall be restricted to authorized personnel.

USER INTERFACE REQUIREMENTS

The user interface of the application must be user-friendly, intuitive and easy to use. The interface must provide ways to navigate easily from one place to another. The system must allow the user to preview queries and reports before printing.

PERFORMANCE REQUIREMENTS

The system shall function in real-time: any operation on the stored information, triggered by the member, should complete in less than 10 seconds. The system should allow simultaneous use by at least 50 users, without data corruption.

2.7 PROCESS MODEL FOR THE SYSTEM

Among many of the process models available, Rational Unified Process is used for the system. It is a modern approach inspired by UML and Unified Software Development Process. It has four goal directed phases namely Inception, Elaboration, Construction and Transition.

- Inception In this stage, the project's business case is stated and the team decides if the project is worth doing or if it is even possible. It is important to the process to first formulate the scope of the project and also determine what resources will be needed.
- Elaboration In this stage, the developers take a closer look at the project to determine its architecture and to evaluate the architecture in relation to the project.

- Construction--- In this stage, the development of the project is completed. The application design is finished and the source code is written. It is in this stage that the software is tested to determine if the project has met its goal laid out in the inception phase.
- Transition -- In this stage, any fine-tuning is performed. Any final adjustments can be based on user feedback, usability or installation issues [5].

The figure 2.3 presents the phases of Rational Unified Process.

Figure 2.3: Rational Unified Process

Rational Unified Process was chosen focusing on following benefits of it.

- Less time is required for integration as the process of integration goes on throughout the software development life cycle.
- The development time required is less due to reuse of components.
- Requirements can be changed during the process, this can manage this
- Changing requirements
- This process uses UML which helps in clearly visualizing the system

DESIGN

CHAPTER 3

Findings of the requirement analysis phase was taken into consideration when designing the system. A good design leads to a successful implementation. This chapter describes the desired features and the operations of the system in detail, using screen layouts, process diagrams and database diagrams.

3.1 DESIGN STRATEGIES

While the software is being conceptualized, a plan is chalked out to find the best possible design for implementing the intended solution [6]. Out of the following alternative solutions, develop a web based application was selected as best possible solution to implement the system.

• Solution 1 : Develop a web based application

After the design stage, the system could be implemented as a web solution using reusable codes and components. This way the system would have the features and attributes the association needed. Reusing existing components will speed up the work and enhance the quality of the system. Web solution will allow the office bearers to use the system from anywhere and it will be accessible for the members as well. Furthermore this approach enables customization in future releases.

• Solution 2: Develop a standalone application

Currently the association is managing the data manually. A standalone system could be implemented for the office bearers of the association. The main issues that can occur are the members will not have any interaction with the system so self-registration, communication, even registration will not be possible. The office bearers will have to visit association premises to use the system. This approach was rejected as the information needed to be accessible from multiple computers.

3.2 SYSTEM DESIGN

Unified Modeling Language (UML) was used to design the diagrams based on Object Oriented concepts. To elaborate the functionalities of the system diagrams such as use case diagrams, activity diagrams, sequence diagrams had been used. Such design diagrams were useful when explaining the proposed system to the client.

3.2.1 MEMBER MANAGEMENT MODULE

This module is used to handle details related to members. Other than their personal information module keeps their registration details, login details and an activity log. The members can maintain a profile for them which is visible to other members of the association.

The sequence diagram in figure 3.1 describes the member registration process based on a time line.

Figure 3.1: Sequence Diagram; Member Registration

3.2.2 DONATION MANAGEMENT MODULE

Donation Management Module captures, stores and tracks wide variety of donation related information. The module is used to register donors, allocate donations, automatically send reminders and appreciation letters to donors and also for report generation.

3.2.3 SCHOLARSHIP MANAGEMENT MODULE

This module deals with issuing scholarships to the students. The module maintains data about scholarship requests, scholarship allocation schemes and scholarship offers.

| Criteria | Values | Marks | Factor | |
|-----------------------------|-----------------------|-------|-----------------|--------------|
| | Physical | 50 | 1 st | 1 |
| | Biology | 40 | attempt | 0.95 |
| A/L stream | Technology | 30 | 2 nd | 0.90 |
| A/L stream | Commerce | 20 | attempt | |
| | Arts | 10 | 3 rd | |
| | | | attempt | |
| Result | А | 20 | | |
| | В | 15 | | |
| | С | 10 | | |
| | S | 05 | | |
| | F | 00 | | |
| Z score | | | 100 | |
| Extra-Curricular activities | 2 activities or more | 10 | | |
| | 1 activity | 05 | | |
| | Below Rs.50,000 | 15 | | |
| Family Income (Annum) | Rs.50,000 – Rs.100000 | 10 | | |
| | Above Rs.100000 | 05 | | |
| Income of the head of the | | | Permanent | - 1 |
| household | | | Temporary | / - 2 |
| Parents' Information | Father and mother | 20 | | |
| | deceased | | | |
| | Father deceased | 15 | | |
| | Father Disabled | 10 | | |
| | Mother deceased | 05 | | |
| | 5 or more siblings | 15 | Doing A/L | . - 3 |
| Siblings' Information | 3 or 4 siblings | 10 | Doing O/L | 2 |
| Sionings information | 2 or less | 05 | 1-10 grade | s – |
| | | | 1.5 | |

Mechanism as shown in table 3.1 had been used to rank the eligible scholarship applicants.

 Table 3.1: Scholarship Selection Mechanism

Following notations are used when defining the formula

- A/L Stream Marks A_m
- A/L Attempt Factor A_f
- Result Marks for subject i- R_i
- Z Score Z
- Z Score Factor Z_f
- Extra Curricular Activity Marks Em
- District Rank D

- Family Income Marks -I_m
- Parents' Information Marks-P_m
- Siblings' Information Marks-S_m
- Siblings' Information Factor –S_f
- Head of The Household Income Factor I_f

 $Grade = (A_m * A_f) + \frac{\sum_{i=1}^n R_i}{n} + (Z * Z_f) + E_m + 100 * (\frac{1}{\sqrt{D}}) + (I_m * I_f) + P_m + (S_m * S_f)$

Students are ranked based on the descending order of the grade

3.2.4 EVENT MANAGEMENT MODULE

Event Management Module keeps track of event data, event attendee data, event history and event payments. Part of the module is accessible for the outsiders and members through the web site.

User actions were grasped by the activity diagrams. The activity diagram in figure 3.3 describes the event management process.

Figure 3.2: Activity Diagram; Event Management

3.3 INTERFACE DESIGN

Graphic User Interface (GUI) of an application is receiving greater attention, since it can be decisive in determining if the application is accepted or rejected by users [7]. Different mechanisms had been used to increase user friendliness and to keep user attracted. Familiar Terminology, Cool colors, Image icons and instant help are some of them. Combo boxes, dialog boxes are used to limit user typing and hence limit user errors and increase speed. Prototypes had been used to verify the content in the user interfaces.

3.3.1 MAIN USER INTERFACES

HOME PAGE

The home page of the PPFA can be accessed through the url www. weeraketiyarajapaksappfacolombo.lk. It is a dynamic site which attractively presents the association information, latest news, upcoming events and facilitates in buying souvenirs through the e-shop. Through the site members can purchase event tickets and register for events as well. Moreover, the site provides facility for outsiders to make donations. Figure 3.4 shows the home page of the web site in both desktop and mobile view.

Figure 3.3: PPFA Web Site Home Page Desktop & Mobile view

DASHBOARD

Figure 3.4: Dashboard; Alumni Management System

Figure 3.5 shows the main screen a user would get that has provision for access into the system. The available features may differ based on the privileges of the user. Guest users who have limited access are not allowed to access the system.

MEMBER PROFILE

Every member with log in credentials to the system is able edit his/her own individual profile .The profile is created at the time of registration with some personal information which he/she can complete later. Other users can view the profile. Figure 3.6 illustrates the profile page.

TASK PROGRESS VIEW

Each event comprises of multiple tasks. The tasks are assigned to committee members and they are updating their task progress from time to time. Secretary/ President and the committee members can view the progress of the event through the interface shown in figure 3.7

DATA ENTRY FORM

The system has input forms to gather necessary data and to pass them to the database. The forms are designed in a user friendly manner and data validation has been implemented to minimize user errors. Data retrieved from the database are filled in to input forms so same form is used for updating data. The system consists of many forms similar to the one shown in figure 3.8.

3.4 DATABASE DESIGN

Data are a valuable asset of any organization. Database design is a process of modeling an enterprise in the real world. In fact, a database itself is a model of the real world that contains selected information needed by the enterprise [8]. A good database design results in proper management, easy retrieval of data in the system. The figure 3.9 illustrates the database design of the system.

Figure 3.8: Database Design

3.4.1 DATA NORMALIZATION

Normalization is a systematic approach of decomposing tables to eliminate data redundancy and undesirable characteristics like Insertion, Update and Deletion anomalies [9]. It follows multiple steps to remove duplicate data from relational tables. The purpose of normalization is to eliminate data redundancy and ensuring data consistency.

For example table 3.2 show the initial form of Office_bearers table

| name | position | address 🔺 | tpno | email |
|------------------------|-----------|--|-------------------------------|----------------------|
| R.L.Karunasena | Secretary | 23/5, Gammana Rd, Maharagama | 0773467451 | karu@yahoo.com |
| Thamara Waidyaratne | Patron | 34, Circular Rd, Mahalwarawa | 075-3423679 | thamara789@gmail.com |
| Jayantha Fernando | Treasurer | 56 B, Piliyandala Rd, Siddamulla, Kottawa | 0112-615896/0777856321 | jayantha56@gmail.com |
| T.Gamage | Patron | 67B,Kawdana,Rathmalana | 011-2435896/076- 668843234 | tgamage@yahoo.com |
| Mr.A.K.Perera | President | No 2, Malwatta Rd, Maharagama | 011-2617564/0712347892 | akperera@gmail.com |

 Table 3.2: Office_bearers table

As per first normal form each column must have a unique value so the above table is converted in to 1NF as follows.

| name | position | address 🔺 | tpno | email |
|---------------------|-----------|---|---------------|----------------------|
| R.L.Karunasena | Secretary | 23/5, Gammana Rd, Maharagama | 0773467451 | karu@yahoo.com |
| Thamara Waidyaratne | Patron | 34, Circular Rd, Mahalwarawa | 075-3423679 | thamara789@gmail.com |
| Jayantha Fernando | Treasurer | 56 B, Piliyandala Rd, Siddamulla, Kottawa | 0112-615896 | jayantha56@gmail.com |
| Jayantha Fernando | Treasurer | 56 B, Piliyandala Rd, Siddamulla, Kottawa | 0777856321 | jayantha56@gmail.com |
| T.Gamage | Patron | 67B,Kawdana,Rathmalana | 011-2435896 | tgamage@yahoo.com |
| T.Gamage | Patron | 67B,Kawdana,Rathmalana | 076-668843234 | tgamage@yahoo.com |
| Mr.A.K.Perera | President | No 2, Malwatta Rd, Maharagama | 0712347892 | akperera@gmail.com |
| Mr.A.K.Perera | President | No 2, Malwatta Rd, Maharagama | 0712347892 | akperera@gmail.com |

Table 3.3: Office_bearers table; 1NF

The applicant table in 1NF shown in table 3.4

| applicant id | int(10) |
|-------------------------|--------------|
| proposer_id | int(11) |
| applied_date | date |
| applicant_title | varchar(5) |
| applicant_fname | varchar(200) |
| applicant_Iname | varchar(200) |
| applicant_dob | date |
| applicant_gender | varchar(20) |
| applicant_nic | varchar(20) |
| applicant_albatch | int(10) |
| proposer_email | varchar(100) |
| applicant_email | varchar(100) |
| applicant_tel | varchar(20) |
| verification_no1 | varchar(50) |
| verification_no2 | varchar(50) |
| ispaid | varchar(10) |
| applicant_status | varchar(20) |
| treasuere_verified | varchar(10) |
| treasurer_verified_date | date |

| approved_by | varchar(100) | |
|---------------------------------|--------------|--|
| approved_date | date | |
| Table 3.4: Applicant Table; 1NF | | |

As per the Second Normal Form there must not be any partial dependency of any column on primary key [9]. So to achieve the 2NF the above table was split in to two moving the approval details in to an independent table.

New applicant table 2NF would be shown in table 3.5;

| applicant id | int(10) |
|---|---|
| proposer_id | int(11) |
| applied_date | date |
| applicant_title | varchar(5) |
| applicant_fname | varchar(200) |
| applicant_Iname | varchar(200) |
| applicant_dob | date |
| applicant_gender | varchar(20) |
| applicant_nic | varchar(20) |
| | |
| applicant_albatch | int(10) |
| applicant_albatch proposer_email | int(10) varchar(100) |
| applicant_albatch proposer_email applicant_email | int(10) varchar(100) varchar(100) |
| applicant_albatch proposer_email applicant_email applicant_tel | int(10) varchar(100) varchar(100) varchar(20) |
| applicant_albatch proposer_email applicant_email applicant_tel verification_no1 | int(10) varchar(100) varchar(100) varchar(20) varchar(50) |
| applicant_albatch proposer_email applicant_email applicant_tel verification_no1 verification_no2 | int(10) varchar(100) varchar(100) varchar(20) varchar(50) varchar(50) |
| applicant_albatch proposer_email applicant_email applicant_tel verification_no1 verification_no2 ispaid | int(10) varchar(100) varchar(100) varchar(20) varchar(50) varchar(50) varchar(10) |
| applicant_albatch proposer_email applicant_email applicant_tel verification_no1 verification_no2 ispaid applicant_status | int(10) varchar(100) varchar(20) varchar(20) varchar(50) varchar(50) varchar(10) varchar(20) |

New applicant_approval table introduced for 2NF would be

| Applicant_approval_id | Int(11) |
|--|--------------|
| Applicant_id | Int(11) |
| treasuere_verified | varchar(10) |
| treasurer_verified_date | date |
| approved_by | varchar(100) |
| approved_date | date |
| Cable 3.6: Applicant Approval Table; 2NI | |

3NF applies that every non-prime attribute of table must be dependent on primary key. So this transitive functional dependency should be removed from the table and also the table must be in Second Normal form [9].

IMPLEMENTATION CHAPTER 4

Implementation converts the concept presented in the design into an outcome. Latest available technologies had been used to implement the system. This chapter presents the implementation environment, implementation approach and the coding details.

4.1 IMPLEMENTATION ENVIRONMENT

A suitable environment has to be established to ensure that the implementation process runs smoothly. Hardware was used to implement the system efficiently and to get best performance of software. When choosing software compatibility, features were considered and more attention was given to choose free and open source software.

4.1.1 SOFTWARE ENVIRONMENT

Following languages and technologies had been used for system development

- PHP
- HTML
- CSS
- Javascript
- JQuery
- AJAX

Following software and development tools had been used with above languages and technologies.

- Windows 8.1 Pro operating system
- XAMPP version 5.6.31 including
- Apache server 2.4.26
- PHP 5.6.31
- phpMyAdmin 4.7.0
- Ozeki NG SMS Gateway 10.0.45
- NetBeans IDE 8.2
- Adobe Photoshop CS6

4.1.2 HARDWARE ENVIRONMENT

The System was implemented in a computer having following hardware configurations.

- Intel® Core[™] i5 Duo CPU 1.60 GHz
- 4 GB RAM
- 1 TB Hard disk

The system incorporates SMS feature which was tested using a GSM mobile phone.

4.2 REUSED MODULES

FolioGallery

It is a photo gallery implemented using the technologies PHP, AJAX and JQuery. It is a simple and lightweight gallery that does not require a database to run. It has features such as display multiple albums and/or full gallery in one page, automatic thumbnail creation, enable captions for thumbnail, etc [10].

JQuery Date Picker

It is a highly customizable plugin for bootstrap that supports multiple languages [11].

Fusion Charts

It is a Javascript charting solution for web and mobile. It supports basic charts such as line, column, pie etc and most complex ones such as waterfall, gantt, candlestick, zoomline etc [12].

Data Tables

DataTables is a free and open source plug-in for the jQuery Javascript library. It is a highly flexible tool, and add advanced interaction controls to any HTML table. It supports Pagination, instant search and multi-column ordering [13].

4.3 WEB FRAMEWORKS USED

4.3.1 BOOTSTRAP

Boostrap is a free and open source client side web UI framework. It helps to overcome the overhead associated with common activities performed in designing the front end of the web pages. Bootstrap contains HTML and CSS-based design templates for typography, forms, buttons, navigation and other interface components as well as optional JavaScript extensions [14].

```
<div class="dash">Member Management</div>
      <div class="container-fluid">
            <div class="row">
                   <div class="col-md-6">
                   <a href="../view/addmember.php">
                   <button type="button" class="btn btn-primary btn-</pre>
            sm">
                   <i class="glyphicon glyphicon-user"> </i>
                    Add a Member
                   </button>
                   </a>
                   </div>
                   <div class="col-md-6" style="text-align: right">
                         <form action="searchmember.php"
method="post">
                         <input type="text" class="input-sm"</pre>
required=""
name="searchkey" placeholder="Search Members" />
                         <button type="submit" name="search"</pre>
                   class="btn btn-primary btn-sm">
                         <i class="glyphicon glyphicon-search"></i>
                   </button>
                         </form>
                   </div>
            </div>
```

The above code creates the output shown in figure 4.1

Figure 4.1 Bootstrap code output

4.3.2 MVC FRAMEWORK

MVC is a well known architectural pattern popular among professionals in IT industry. It divides a given application into three interconnected parts. That is, it seperates data modal with the business logic as well as user interface. The benefit of using the MVC pattern speeds up the development process and also the modifications does not affect the entire model.

Source: https://en.wikipedia.org

4.4 MAJOR CODE SEGMENTS

The code was written in readable and understandable format to ease future enhancements. The readability of the code was maintained by comments, meaningful variable names and code indentation.

MVC design pattern had been followed when writing the code. According to MVC pattern, code related to a specific function comprises of three parts; Model, View and a Controller. Implementation of each component is described below with appropriate code segments.

4.4.1 LOGIN

MODEL

The username and password passed for the login model is obtained by the controller and if the values are not null, the value is matched with the usernames in the database. A user

session is created if relevant record is found and the status of the user is 'active' and the user is redirected to the dashboard.

LoginModel.php

```
<?php
class login {
    public function loginvalidate($email, $pass) {
        $con = $GLOBALS['con'];
        //sql query
        $sql = "SELECT * FROM login 1,member m,role r WHERE
    l.email='$email' AND 1.password='$pass' AND
    l.member_id=m.member_id AND m.role_id=r.role_id AND
    m.member_status='Active'";
        //Execute a query
        $result = $con->query($sql);
        return $result;
    }
}
```

VIEW

The users are interacting with the View component which is presented to the users as forms. For client side validation form displays error messages if data are empty and server side validation if data are invalid.

```
Login.php
```

CONTROLLER

The controller gets the username and password through the \$_POST method while removing blank spaces in front and back of the email & password. After that it encrypt the password using sha1 algorithm because passwords are saved in database encrypted using SHA1. Then it checks the results gets from login model. For the given username & password, if a record available and expiry date not passed it adds member info to session and let user to redirect to dashboard. If a record available but expiry date passed it redirect user to renewal page. If user name and password not matching with database table it shows a validation message "Invalid Email address or Password".

loginController.php

```
<?php
//To start the session
if (!isset($ SESSION)) {
    session start();
//To set default time zone
date default timezone set("Asia/colombo");
//Server side validation
if ($ POST['email'] == "" || $ POST['pass'] == "") {
//To encode the message
    $msg = base64 encode("Empty Email address or Password");
//Data passing through URL
    header("Location:../view/login.php?msg=$msg");
    exit();
include '../common/dbconnection.php';
include '../model/loginmodel.php';
//Get the db connection
$ob = new dbconnection();
$con = $ob->connection();
//Get the values
$email = trim($ POST['email']); //remove space before and after
$pass = shal(trim($ POST['pass'])); //Encript the password to
compatible with table field
//Get login details for given user
```

```
$obj = new login();
$result = $obj->loginvalidate($email, $pass);
$row = $result->fetch array();
$member id = $row['member id'];
$member expiry date = $row['member expiry date'];
if ($result->num rows == 1 && $row['member expiry date'] >=
date("Y-m-d")) {
//To get member details
    $ SESSION['member info'] = $row;
   header("Location:../view/dashboard.php");
    //renewal
} elseif ($result->num_rows == 1 && $row['member_expiry_date'] <</pre>
date("Y-m-d")) {
    $expirydate = base64 encode("$member expiry date");
header ("Location:../view/renewal.php?member id=$member id&expiry
date=$expirydate");
    //invalid logins
} else {
    $msg = base64 encode("Invalid Email address or Password");
    header("Location:../view/login.php?msg=$msg");
?>
```

EVALUATION

CHAPTER 5

A software evaluation is a type of assessment that seeks to determine if software or a combination of software programs is the best possible fit for the needs of a given client [15]. The system was tested to find errors and to ensure that it is free from bugs. Then the software was evaluated by potential users to check whether how much the original intended goals had been achieved.

5.1 TESTING

Testing process determines whether the system meets its expected results. Rational Unified Process was chosen as the software process model so testing was carried out in elaboration, construction and transition phases.

5.1.1 TEST PLAN

Testing was carried out according to the scheme presented in the test plan. Initially unit testing was carried out with the classes. Methods in the classes were tested by sending a specific input to a method and verifies that the method returns the expected value. After unit testing integration testing was carried out to discover the issues arise when different modules are interacting with each other. Finally system testing was done to check the overall functionality of the system.

5.1.2 TEST CASES

A test case is a set of test inputs, execution conditions, and expected results developed for a particular objective [16]. System functionality could be tested with properly planned test cases. The system was decomposed in to modules to reduce the complexity and to minimize the dependency. Test cases of major modules are presented below. (Refer Appendix E for the test case results)

TEST CASES FOR MEMBER LOGIN

Test cases and expected results of the member login are displayed in below table 5.1

| Test | Test Description | Testing Steps | Test Data | Expected Result |
|-------|------------------|--------------------|-------------------|------------------|
| Case | | | | |
| No | | | | |
| TC 01 | Validate input | 1. Enter user name | Blank user name & | Error message |
| | details in login | according to | blank password | "Both Email and |
| | form | test data | | password are |
| | | 2. Enter password | | Empty" |
| TC 02 | | according to | Blank user name & | Frror message |
| 10.02 | | test data | given password | "Empty Email" |
| | | 3. Press login | given pussword | Empty Email |
| | | button | | |
| TC 03 | | | Given user name & | Error message |
| | | | blank Password | "Empty password" |
| | | | | |
| TC 04 | | | Wrong amail and | Error massage |
| 10.04 | | | correct password | "Invalid Email |
| | | | contect password | address or |
| | | | | Password" |
| | | | | 1 455 WOLD |
| TC 05 | | | Correct email and | Error message |
| | | | wrong password | "Invalid Email |
| | | | | address or |
| | | | | Password" |
| TC 06 | | | Both incorrect | Error message |
| | | | email & password | "Invalid Email |
| | | | | address or |
| | | | | Password" |
| TC 07 | | | Correct email & | Redirect to |
| | | | correct password | Dashboard |
| | | | | |
| | | | | |
| TC 08 | | | Correct email & | Error message |
| | | | correct password | "Invalid Email |
| | | | with account | address or |
| | | | disabled | Password |
| | | | | |
| | | | 1 | |

Table 5.1: Login test case

TEST CASES FOR MEMBER MODULE

Test cases and expected results of the member module are displayed in below table 5.2

| Test | Test | Testing Steps | Test Data | Expected |
|------|----------------|--------------------------|---------------|---------------|
| Case | Description | | | Result |
| No | | | | |
| тС | Validata input | 1 Enter first name last | First name | Error massage |
| | vanuale input | 1. Enter mist name, last | | "Enorty Einst |
| 01 | | name, date of birth, | empty | Empty First |
| | member form | gender, ID No, A/L | | Name |
| TC | | batch, email, | Last name | Error message |
| 02 | | telephone no, role, | empty | "Empty Last |
| | | image | | Name" |

Table 5.5: Task module test case

5.1.3 ACCEPTANCE TESTING

The system was hosted in a test server and first tested by the developer her self. Then it was tested by a set of representatives from the association. They checked whether the system meets the operational needs of the association. Some modifications were requested by the representatives and after doing necessary modifications system was diployed in the actaul servers with real data. System was accessed with different previledges to check the functionality requested for each role was implemented properly. The system was accepted by the users and they expect that the association would function smoothly and efficiently after introducing the system.

5.2 USER EVALUATION

User evaluation provides direct information about how users perceive the new systems and the challenges they face when using the new system. Users' perception was evaluated through the questionnaire below.

| Role : | | | | | |
|---|----------------------|----------|-------------------------------|-------|-------------------|
| Criterion | Strongly Disagree | Disagree | Neither agree nor disagree | Agree | Strongly Agree |
| The system does what was proposed | | | | | |
| the user interface is easy to understand | | | | | |
| I am satisfied with the look and feel of the system | | | | | |
| it is easy to navigate through the system | | | | | |
| The system provides help in a clear manner | | | | | |
| The system generated errors in a problematic manner | | | | | |
| I am satisfied with the performance of the system | | | | | |
| I am satisfied with the security of the system | | | | | |
| I will recommend this system to other members | | | | | |
| Do you have any thoughts in improving the system? | | • | | • | |
| | | | | | |

Alumni Management System Evaluation Form

Figure 5.1: System Evaluation Form

The above printed questionnaires were distributed among set of members shown in table 5.6

| Role | No of members |
|-------------------|---------------|
| Administrator | 1 |
| President | 1 |
| Secretary | 1 |
| Treasurer | 1 |
| Committee Members | 3 |
| Members | 23 |

 Table 5.6: Sample for questionnaire distribution

5.2.1 EVALUATION RESULTS

Questionnaire Results Summery

Figure 5.2: Questionnaire Results Summery

The table above indicates that the system has met user expectations as everyone agree that the system does what it supposed to do. According to the above results most users are satisfied about the user friendliness of the system. On average 70% believe that the system is user friendly and 30% strongly believe that. As per the users' feedback the help provided by the system, could be improved in the future. The results indicate that the system is error free and the system had fulfilled the non functional requirements up to certain extent. Users are willing to recommend the system to others as well.

The users expect to more interaction with the members through the system. It is obvious from the following comment.

"I wish this similar to facebook"

Some users prefer to have a mobile app as an improvement of the current system. It is clear by the statement.

"I don't use the computer very much. If I can access this system through my phone it is easy for me"

CONCLUSION

CHAPTER 6

The aim of the project was to implement an alumni management system for the PPFA of Weeraketiya Rajapaksha College. The functions of the association had been carried out manually and they had maintained a static web site. So with an initial idea of the president, this project was initiated. Requirements were gathered by interviewing office bearers and members of the association and was finalized by some discussions with responsible personnel. The system was implemented as a web solution as the office bearers and members needed access to the system from anywhere. And also it was convenient to share data between the web site and the system. The implemented system provides a platform for communication and active interaction between alumni as well as current students. Each user is classified into user groups and the user could interact with the system based on the permissions and functionalities which are pre-defined for the user group. The system was implemented using latest web technologies such as PHP, MYSQL, AJAX and JQUERY. Bootstrap had been used as the front end framework and MVC had been used as the back end framework. The system was tested in many stages using appropriate testing mechanisms for each stage to enhance the quality. The system was hosted and successfully used by the association. By users' feedback it is evident that the project succeeded.

6.1 LESSONS LEARNT

This course component has given a chance to apply the theoretical knowledge gained in the first two years of the degree program. The concepts leant in project management had been used in great extent throughout the project. The domain area is difference compared to the domains considered when implementing management information systems. Thus mapping client requirement to a computerized system was a complex task and gained a lot of experience in providing a computerized solution to an existing manual process in an alumni association.

The programming knowledge was vital to implement the system with new technologies and finally deliver a quality product in an acceptable manner. This component had helped me to apply my programming skills for a real world scenario and I learnt new tools and technologies such as Ajax, JQuery. It was interesting to study the MVC architecture and implement the system according to that design pattern. When working with real clients I understood that implementing the system is not enough but maintaining the quality of the system is much more important. Thus the system was tested with many test cases and finally tested by the client as well.

This course component has helped to develop the soft skills such as technical writing, communication skills, time management and problem solving. Preparing the dissertation has increased the technical writing skills and the interviews, discussions, negotiations had sharpen the communication skills. By developing the system according to a schedule I learnt to manage activities efficiently and in a timely manner.

6.2 FUTURE IMPROVEMENTS

With a project addressing a real world scenario there is always room for improvement.

Integrating a mobile app

The system evaluation summery indicates that the users prefer a web app of the system. Then users can access to the application anytime using their smart phones and a better experience can be delivered to the user as screen size and touchscreen make web application much more difficult to use through mobile phones.

• Expand the number of users

The PPFA alumni management system is only usable by members of the Colombo chapter. In the future access to the system can be allowed to the members of other chapters as well.

• Improve the collaboration module

Messaging module is already implemented which can be enhanced to allow chatting. Photo sharing component can be added so that it has functionalities of social media sites such as tagging, commenting, liking.

Implement a job portal

A job portal can be integrated to the current system. As there are past pupils who are leading professionals they can share career opportunities with students as well as fellow members.

Improve report module

More reports can be generated by the system to derive meaningful information from the existing data. An accounting module could be integrated to get a comprehensive idea about the cash flow of the association.

APPENDIX A –

SYSTEM DOCUMENTATION

This document gives step by step instructions to install RCC Alumni Management System.

SYSTEM REQUIREMENTS

HARDWARE REQUIREMENTS

| Hardware | Minimum Requirement |
|-----------|------------------------------|
| Processor | 3.0 GHz Intel Processor |
| Memory | 1 GB RAM |
| Hard Disk | 40GB Capacity |
| Internet | Standard Internet Connection |

Table A.1: Hardware Requirement

SOFTWARE REQUIREMENTS

| Software | Minimum Requirement |
|------------------|--|
| Operating System | Windows 7, Windows 8.1, Windows 10 |
| ХАМРР | XAMPP V5.6.31 or |
| | Separate Installation of Apache 2.4.26 |
| | /MySQL 5.5.32 / PHP 5.6.31 / |
| | phpMyAdmin 4.7.0 / Mercury Mail |
| | Transport System v4.63 |
| Web Browser | Google Chrome Version 61.0.3163.100 |
| | Fire Fox 55.0.3 |
| PDF Reader | Adobe Acrobat Reader |

Table A.2: Software Requirement

INSTALLATION

Download and install XAMPP for Windows from https://www.apachefriends.org/index.html. Give installation path to C:\xampp of the computer.

- Install a given web browser above.
- Open the CD and copy the ppfa folder and paste into "C:\xamp\htdocs"

DATABASE INSTALLATION

- Open the web browser and type the URL <u>http://localhost/phpmyadmin/</u>
- Create a new database named "ppfa" and in "Import" tab browse CD for ppfa database.
- After selecting ppfa in CD click Go.

SYSTEM LAUNCHING

- Open XAMPP control panel and start Apache & MySql services.
- Open web brower and type URL <u>http://localhost/ppfa</u> and press enter button.

APPENDIX B - DESIGN DOCUMENTATION

The diagram in figure B1 is a detailed use case diagram of the member registration process.

Figure B.1: Use Case Diagram; Member Registration Process

Throughout the year, PPFA organizes many events for our alumni and the community. Figure B.2 shows the use case diagram of event management process.

Figure B.2: Use Case diagram; Event Management

Notification module automatically creates membership renewal reminders; membership confirmations, donation requirements and event reminders. Activities in notification module is depicted in figure B.3

Figure B.3: Use Case Diagram: Notification Module

More than 100 users will be accessing the system under different privileges. Figure B.4 shows how they are interacting with the system.

Figure B.4: Use Case Diagram: User Module

Sequence diagram show interaction among objects in a time sequence. Figure B.5 shows the sequence diagram of the donation management process.

Figure B.5: Sequence Diagram: Donation Management

Activity diagram visually presents a series of actions or flow of control in a system similar to a flowchart. The activity diagram of the member registration process shown in figure B.6.

Figure B.6: Activity Diagram; Member Registration Process

APPENDIX C –

USER DOCUMENTATION

Different user levels has different system privileges so profiles are different in each and every user level. This user documentation assumes administrator role which has all the system privileges.

LOGIN FORM

Following C.1 figure shows the login form which used to login into the system. User can use email address and password to login into system. Validations in the user form check for correct user name and password. User can change the password using forgot password link.

| RCC ALUMNI MANAGEMENT |
|---|
| Login |
| Empty password |
| prashani@gmail.com |
| Password |
| Login |
| Forgot password? |

Figure C.1: Login Form

DASHBOARD

All the modules of the system can access through the system dashboard. The modules that appear on the dashboard may differ according to user privileges. Left side bar includes common frequent access items for easy access. Signout button is always available at the top left on the window.

Figure C.3: Main data table view page

OTHER TABS

Shows current module tab and other tabs related to that module.

SEARCH TABLE

Data in the table can be search using search field. Searching is possible with this data or set of data.

ADD NEW ENTRY

New entry can be added to the table using the given button.

PAGINATION

Use to go through the pages of the data table

OPERATIONAL BUTTONS

View – Can get the full view of the relevant entry

Update- Update the entry

Active/Deactive - change the status of the entry

MEMBER PAGE

After applicant get approved he/she gets a member id and his/her data are saved into member table. There is 'all member details table' and in top right corner "Add new member" button in the main page.

ADD MEMBER FORM

New member details can entered the system via this form. Member role is selected from Role. Also member can upload image or if image not uploaded a default image is shown. There are validations for invalid data and if invalid data entered an error message is shown and the user will be unable to submit the form. Duplicate email addresses cannot be entered to the system as the system verifies the new email address with the existing ones in the database.

Figure C.7: Add a product form

STOCK PAGE

Stock details about the products are shown in stock page. Administrator can add a stock using the button in the upper left corner. The stock page shows product name, product code, color, size and stock quantity. Only "view stock" option is available for users other than the administrator. Only the administrator has the privilege to add, update or delete stock.

ADD A STOCK FORM

Stock form page can be used to add stock to the system. Products can be selected using drop down menu and if stock date not added current date is taken as the stock date. A size already in the database is selected or a new size can be added. User can either select a color or give a color name. The color name will be hidden if the user selects a color

code. There is validations to check empty or incorrect data types and if user add invalid data validation message shows and can't proceed further until correct the error.

Figure C.8: Add a product form

EVENT PAGE

Event pages shows all currently planned events in the association. Event data table shows event name, category, date, estimated budget, actual budget and event status.

ADD AN EVENT FORM

Using add event can add event to the system. Event name, event category and date are the compulsory field. Event can be selected through the drop down box. Afterwards description about event, time, venue and estimated budget, actual budget can be added. Relevant tasks to the particular event can be added from here. Then from the task management window those tasks can be modified further. There are validations to check empty or incorrect data types and if user add invalid data validation message shows and can't proceed further until correct the error.

Dear Sir/ Madam,

LETTER OF CERTIFICATION

It is a pleasure to inform that Ms. P.D.Gunasekara has implemented an Alumni Management System & web portal for our association as a part of her final year project requirement in Bachelor of Information Technology.

This system was tested by relevant members of the association which was identified as bug free and user friendly. We strongly believe that this system could be implemented to enhance the quality of the service provided by the association.

Thank you,

Yours Faithfully,

Noroun

WasanthaDewage

(The President)

Past Pupils Friendship Association - WeeraketiyaRajapaksha Central College

GLOSSARY

AJAX - Method of building interactive applications for the Web that process user requests immediately.

Bootstrap - Front-end website and web app development framework

CSS -Cascading Style Sheets used to format the layout of Web pages

HTML – Hypertext Markup Language, a standardized system for tagging text files to World Wide Web pages.

jQuery - A cross-platform JavaScript library designed to simplify the client-side scripting of HTML

MySql - Open source relational database management system (RDBMS) based on Structured Query Language (SQL)

UML - Unified Modeling Language. Standardized modeling language enabling developers to construct and document artifacts of a software system

XAMPP - Free and open source cross-platform web server developed by Apache Friends
