## Masters Project Final Report

### December 2017

Project Title	Open Source Vehicle Reservation System for Company vehicle pool			
Student Name	Ms.R.M Vidanapathirana			
Registration No. & Index No.	2014/MIT/065 14550656			
Supervisor's Name	Mr. G.K.A Dias			
Please Circle the appropriate	Master's Program		Type	
	MIT	MCS	Research	Implementation

For Office Use ONLY

# **Open Source Vehicle Reservation System for a company vehicle pool**

**R.M Vidanapathirana**

**2017**

# **Open Source Vehicle Reservation System for a company vehicle pool**

**Dissertation submitted for the Degree of Master of  
Information Technology**

**R.M Vidanapathirana**

**University of Colombo School of Computing**

**2017**

## Declaration

The thesis is my original work and has not been submitted previously for a degree at this or any other university/institute.

To the best of my knowledge it does not contain any material published or written by another person, except as acknowledged in the text.

Student Name: R.M Vidanapathirana

Registration Number: 2014/MIT/065

Index Number: 14550656

---

Signature:

Date: 14/08/2017

This is to certify that this thesis is based on the work of

Ms. R.M Vidanapathirana

Under my supervision, the thesis has been prepared according to the format stipulated and is of acceptable standard.

Certified by:

Supervisor Name: Mr.G.K.A Dias

---

Signature:

Date: 14/08/2017

## **Abstract**

Each and every mechanism is automated in this new technological era. Many companies transfer their manual processes into automated computerized processes because of the easiness and the reliable use of them.

The main problem addresses in this project is to give an automated solution for a company who is having a large vehicle pool and a manual process to allocate those vehicles. When this task is done manually, employees of the company need to submit a requesting form manually or need to contact the vehicle pool for allocations .This is not an easy task, because the employees need to fill a form and fax it or go and give it to the vehicle pool. On the other hand, the admin of the vehicle pool has to collect the forms manually and need to allocate them manually and the records should be kept manually. Storage of these manual records is another massive problem and it is hard to recheck of these records in future.

This project introduced a sophisticated system for requesting vehicles, scheduling vehicle reservations, maintaining driver details, maintaining vehicle details and of course keeping records of the history of reservations. In brief, an employee can request a vehicle by filling form through the system and when the request is sent to the admin, employee gets an email with the allocation details. Admin can receive requests and he can allocate pool vehicles and also outside vehicles if pool vehicles are not available .Admin can manage driver details and also vehicle details and he can get reports if need. Drivers also get a login to this system where they can see the reservation available for them. They can accept the request and complete them after the ride is finish.

This system can be modified and changed according to any company requirement. So any company (using vehicles for their day today activities) can use this system. The most important requirements are built up in this system and also it is a user friendly system.

This system uses HTML, JAVA, PHP for the web portal and used Android Studio to create the mobile app.

## **Acknowledgement**

I would like to express my gratitude to my supervisor Mr. G.K.A Dias for the useful comments, remarks and engagement through the learning process of this master thesis. Furthermore I would like to thank my office colleagues for introducing me to the topic as well for the support on the way. Also, I would like to thank my Family, who has supported me throughout entire process, both by keeping me harmonious and helping me putting pieces together. I will be grateful forever for your love.

# **CHAPTER 1: Introduction**

## **1.1 Motivation**

A vehicle reservation system is a main system in a large business company which has large number of vehicles for their day today business. Practically I already used this kind of system in my company .As SLT is a leading company in sri lanka they maintained a vehicle reservation system for the use of employees for their day today works. This system motivated to do a more effective , more efficient , more reliable Vehicle reservation system to be used by any company. Having a vehicle reservation system makes the company more easy to use their vehicle in day to day operations.

## **1.2 Statement of the problem**

A large company which is having a large vehicle pool may face to following problems while they reserve vehicles manually for their day to day work.

- Employee need to get a manual form and fill it and submit. Employee has to submit the form to the pool himself. This is a time consuming process.
- When admin gets forms, he needs to manually allocate vehicles by searching the vehicle availability through Files. He has to maintain many files like Reservations, History, Driver attendance, Vehicle availability. This is a time consuming process and the accuracy of the details are doubtful.
- Drivers have a manual attendance marking process. When a reservation made admin has to inform it to the driver manually.
- Admin plays a very stressful role in this manual process.

### **1.3 Aims and Objectives**

The ultimate objective of this project is to provide cost effective, reliable, user friendly computerized system for a vehicle pool of a large company. This system can be modified and changed according to new technologies and for new requirements. So any company (using vehicles for their day today activities) can use this system with their requirements. The basic and main requirements and features are added to this system.

- Objectives of this Vehicle reservation system are as follow:
  - To automate the manual vehicle requesting process.
  - To automate the manual vehicle reservation process.
  - To automate the manual Driver management process.
  - To provide an efficient, reliable, cost effective system.

### **1.4 Scope**

A web based system which a client can reserve a vehicle from the company and also from outside the company. A client can get a login as soon as he fills the login form. To reserve a vehicle, he can fill a request form and he will receive an email saying that his request was sent to the vehicle pool of the company. When the request is accepted, again an email sent to the requested client saying that his request has been accepted and later he will receive an email and a SMS with the details regarding the reservation (driver name, Vehicle No, driver's contact number).

From the Administrator view, when a request made, he need to check whether enough vehicles are free to allocate. If it is free he will accept the request. If not, he will arrange an outside vehicle (Taxi/Cab) manually. This process is not automated and admin need have a connection or an agreement signed with an outside taxi service company. Admin arrange the requirement and send a mail and SMS to the client with the driver's Details. Admin can generate reports regarding vehicle details, driver details and reservation details.

Admin can enter insurance/licence details of each vehicle and if the licences are about to expire, system will pop up an alert one month before the expiration date. So the admin can take necessary actions for that.

Also the authorized people can access the site using mobile through the mobile app made for this vehicle reservation system. They can accept the request and approve them, even if they are not in office. Drivers can mark their availability through mobile and also they can complete the journey after they came back to the office.

Client side and Administrator side features are as follow:

#### **Client side**

- Login to the website.
- Request a vehicle through a requesting form.
- Can check for previous reservation details.
- Can check for their profile details.
- Can view details about the vehicle pool.
- Can use the Mobile app for the above purposes.

#### **Administrator side**

- Can accept requests sent from the user.
- Can check the availability of vehicles.
- Can reserve vehicles for requests.
- Can generate reports (daily reservations/driver attendance/vehicle availability/Licence, insurance details).

## Chapter 2: Background

### 2.1 Similar systems

Vehicle reservation systems are getting popular in the world these days. In the term of vehicle reservation, there can be many reservation types such as company vehicle pool management and reservation systems, Vehicle rental company reservation systems e.t .c.

This Project is mostly aimed at Company vehicle pool management and reservation system, because it is critical to manage a company with a large amount of vehicles for their day to day works and it will be easy if there is a system to manage the vehicle pool.

There are many vehicle pool management systems all over the world and they are created for various reasons.

For an example,

- ❖ **City of Kelowna, decided to change the way they do things when it comes to their pool vehicle operations. After years of struggling with underutilized vehicles and a cumbersome management system, the city of Kelowna became the first city in North America to adopt an efficient and unique pool vehicle management technology.**

**COCOS, an acronym for Company Car Organization system is the technology supplied by INVERS mobility solutions.[5]**

- ❖ **Honeypot IT consulting private Limited is an internationally established software development company with offices USA and India. Transport Portal is an online software application which fulfills the requirement of a typical management of details of vehicles, Transport Categories, Routes and the requests for bus or cab from the employees in a company. It provides the interface to users in a graphical way to manage the daily transactions. Also provides the management reports like Bus Request details, Bus occupancy, Cab Request details, Cab Request Status etc.**

**[3]**

## **Chapter 3: Analysis and Design**

### **3.1 Software Requirement Specification**

#### **3.1.1 Introduction**

##### **Purpose**

This SRS section describes the functionality and the performance goals for the software project “Vehicle Reservation”. This Vehicle reservation system intended to help the employees/clients who need to allocate vehicles for the use of company’s day today performances.

This SRS delivers the features of the Vehicle reservation system to serve as a guide to the developers and a software validation document to the client.

##### **Scope**

In this section we describe the features that are in the scope and that are not in the scope of the software to be developed.

##### **Functionalities of the Client are categorized below:**

- Clients can register through the System.
- Clients can change their details.
- Clients can request a vehicle.
- Clients can cancel a request.
- Clients can check the reservation history.
- Clients can do changes to their profile.
- Clients can do the above tasks using the mobile app too.

### **Functionalities of the Administrator are categorized below:**

- Administrator can check for the vehicle availability.
- Administrator can accept a reservation request.
- Administrator can allocate an outside vehicle if the pool vehicles are already allocated.
- Administrator can add/delete/update vehicle details in the database
- Administrator can get reports.
- Administrator can query the database.
- Administrator can do the above tasks using the mobile app too.
- Administrator gets an alert if the license/insurance are about to expire.

### **Functionalities of the Driver are categorized below:**

- Drivers can mark their attendance through mobile app.
- Drivers can complete the journey through mobile app.

### **Features outside the Scope**

- Vehicle damages, Fuel consumptions are out of the reservation process and should handle separately.
- GPS tracking should handle separately if needed.

### **Overview of Document**

Section 3.1.1 provides a brief introduction of the software requirements of the system. The 3.1.2 section provides a description of the overall system, some user requirements and the interaction between the user and the system. The 3.1.3 section describes the functional and interface requirements in detail.

### **3.1.2 General Description**

#### **Product Perspective**

This Open source vehicle reservation system is mainly based on Companies who are having a large Vehicle pool and who are willing to have a system to manage this vehicle pool. The primary Users will be the registered employees of the company and the administrator who organize everything in the system. This system should be user friendly, quick to access and reliable software to use. Following Products perspectives are important:

- This system must be a stand- alone system which is not depend on another subsystem.
- This system will require a web browser and should support to any browser.
- This system needs not any special hardware components. Basic needs are a computer, working web browser and an internet connection.
- This system should work as a mobile app too. To use the mobile app Clients need a smart Phone.

#### **Product Functions**

Vehicle reservation system support the use cases defined in Table 1.

Use case	Description
Client Details	An Employee can register.
Vehicle details	Details of the Vehicles and drivers.
Reservations	Details of reservation made.
Alerts	Alerts on when a insurances/ license expired

**Table 1: Product functions**

#### **Actors**

- Client/Employee
- Admin
- System

### **Assumptions and dependencies**

- Full working of Vehicle Reservation system is based on the availability of the internet connection to the desktops.
- Full working of Vehicle Reservation system is based on the availability of the internet connection to the Mobile.

### **3.1.3 Specific Requirements**

**Functional Requirements of this Vehicle reservation system are as follow:**

#### **Client side functional requirements**

- Login to the website.
- Request a vehicle through a requesting form.
- Can check for previous reservation details.
- Can check for their profile details.
- Can view details about the vehicle pool.
- Can use the Mobile app for the above purposes.

#### **Administrator side functional requirements**

- Can accept requests sent from the user.
- Can check the availability of vehicles.
- Can reserve vehicles for requests.
- Can generate reports (daily reservations/driver attendance/vehicle availability/Licence, insurance details).

This section describes the functional requirements by giving various use cases. Figure 1 shows the overall use case diagram.

Use case related to Client Details:

**Use case 1: Client**

Primary Actor: Client/Employee

Pre -condition: Internet Connection

Main scenario:

1. User log to the intranet of the Company.
2. System asks the user for a login. If the user is still not a member of the system user need to register to the system.
3. User will get a form to enter specific details of the user.
4. If the user already signed in, they can give the relevant user name and password.

Use case related to Vehicle Details:

**Use case 2: Vehicle**

Primary Actor: Admin

Pre -condition: Internet Connection

Main scenario:

1. Admin Can enter the vehicle details
2. Admin can enter Driver details according to each vehicle
3. Admin can enter details of insurance details of the vehicles

Use case related to Reservation Details:

**Use case 3: Reservation**

Primary Actor: Client/Employee

Pre -condition: internet connection and login

Main scenario:

1. Client enter with the username and password
2. Client fill the reservation form
3. Send to the admin for approval.

Use case related to Alerts Details:

**Use case 5: Alerts**

Primary Actor: Administrator

Pre -condition: Admin need to log to the system backend.

Main scenario:

1. Admin set alert for the insurance details

**Figure 1: overall use case diagram**

**More descriptive use cases:**

**Use cases for Client**

- Get a login
- Make an vehicle request

**Use cases for Admin**

- Check the availability of vehicles
- Accept the request
- Allocate vehicles
- Send details to clients through sms and emails
- Generate Reports
- Enter Insurance/license details

**Use cases for System**

- Pop up an alert for insurance/license

More Descriptive use cases are shown in Figure 2

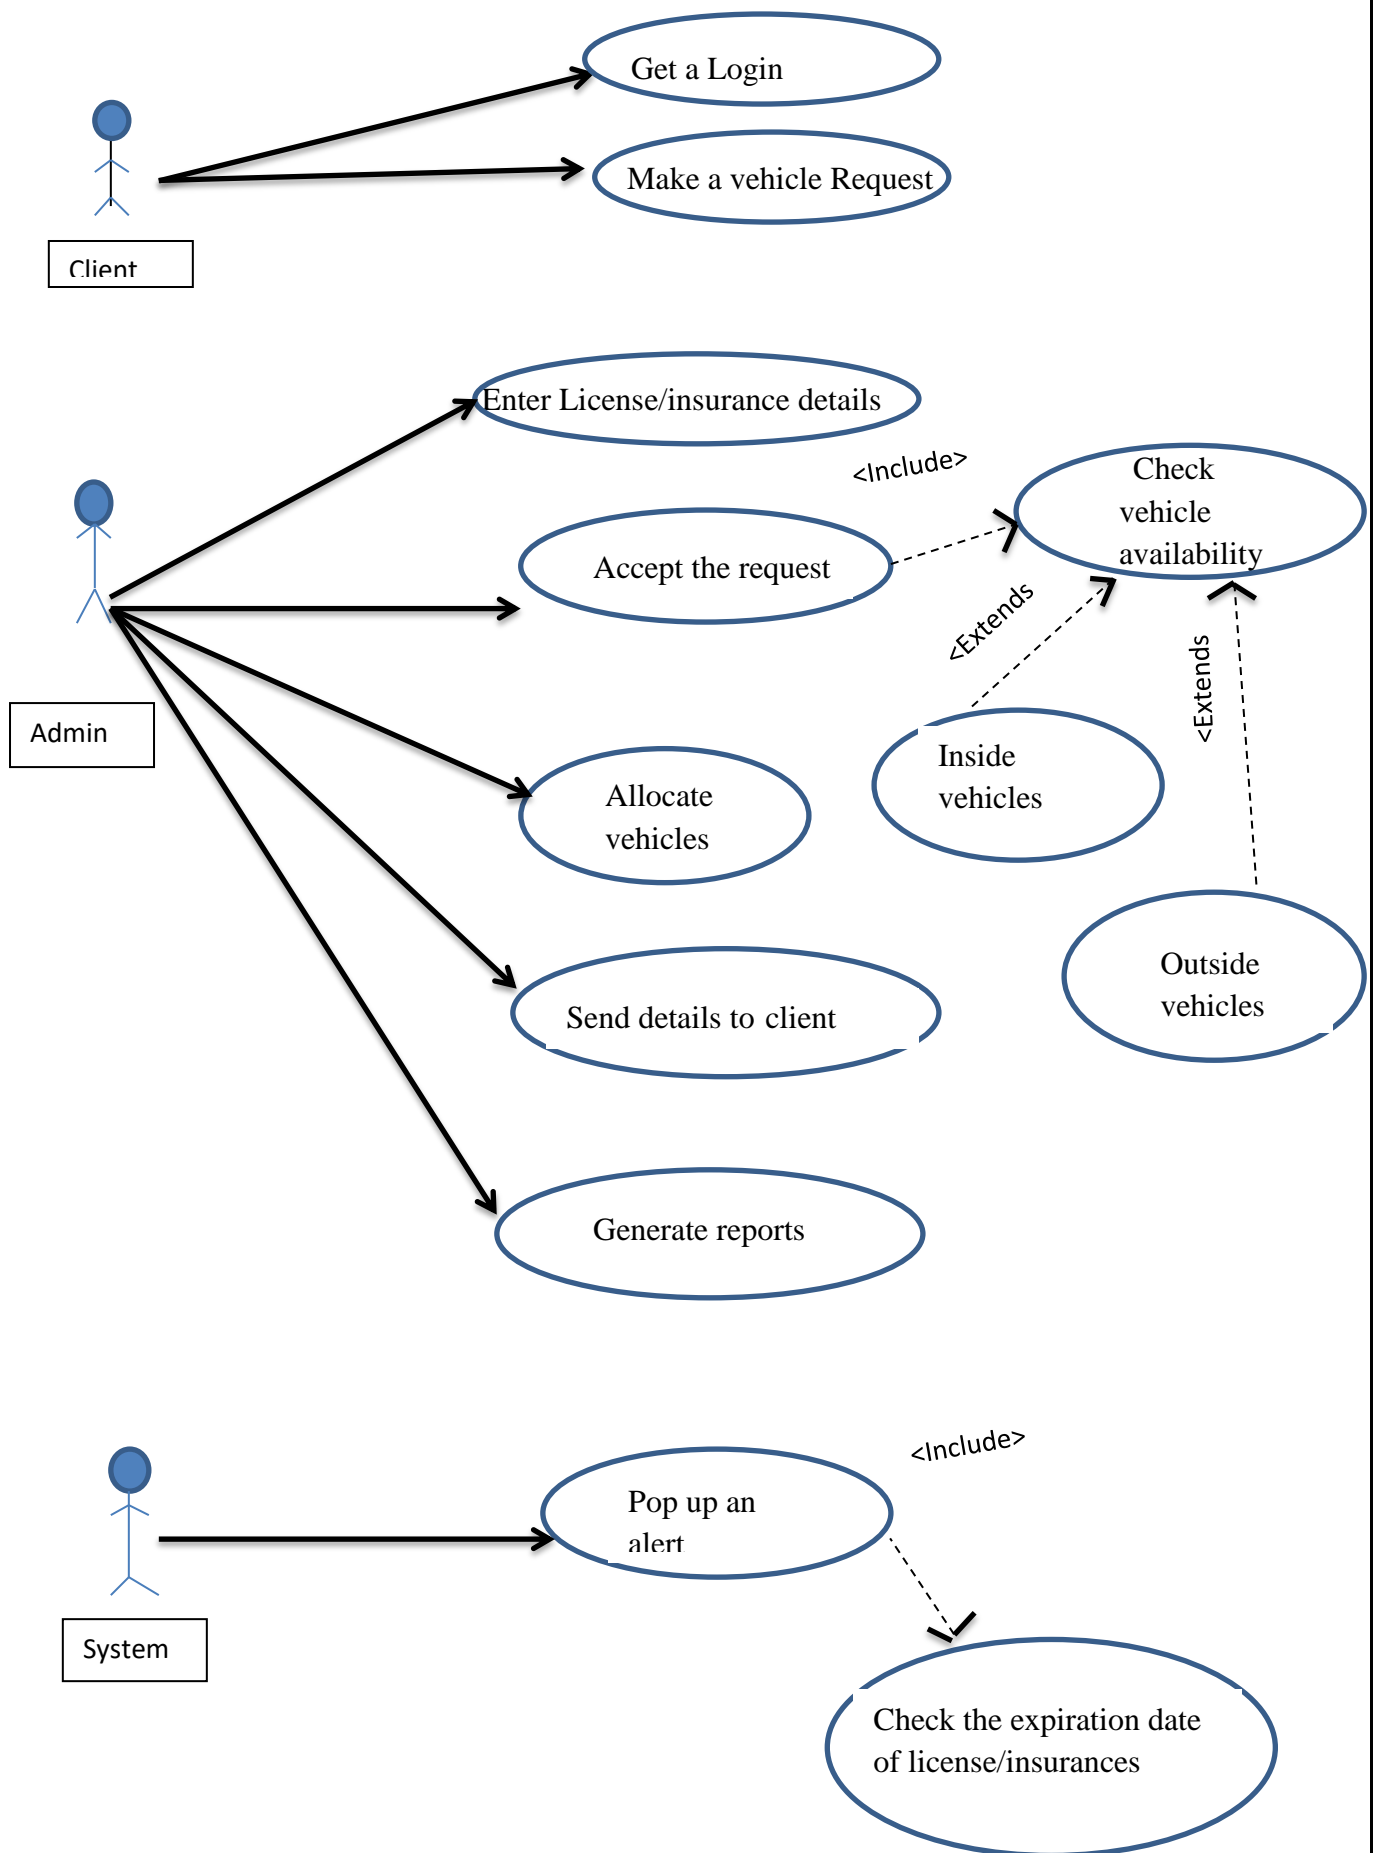

Figure 2: Descriptive use case

**Performance Requirements:**

1. Should have a good internet connection.
2. Compatible machine to log the site or a mobile device to log the site.
3. Mobile device to get alert quickly.

**Design Constraints:**

1. *Security:* The details about the clients and vehicle should be secured.
2. *Fault tolerance:* Data should not become corrupted in case of system crash or power failure.

**Software Requirement Specification**

Programming Languages: Java (jdk1.5),PHP  
Web Technologies : Html, JavaScript.  
Database : Mysql  
Server : Apache

**Hardware Requirements Specification**

Processor : PIII  
Hard Disk: 40 GB  
Ram : 256 mb

## **3.2 Design**

System design is mainly focus on the design of the system which includes the ER diagrams, Process flow diagrams, user interface design etc. Designing the front end and the back end includes under this section.

### **3.2.1 Software architecture**

Software application architecture is the process of defining a structured solution that meets all of the technical and operational requirements, while optimizing common quality attributes such as performance, security, and manageability. It involves a series of decisions based on a wide range of factors, and each of these decisions can have considerable impact on the quality, performance, maintainability, and overall success of the application. The 3 tier-architecture for the reservation system is as follows (Shown in figure 3)

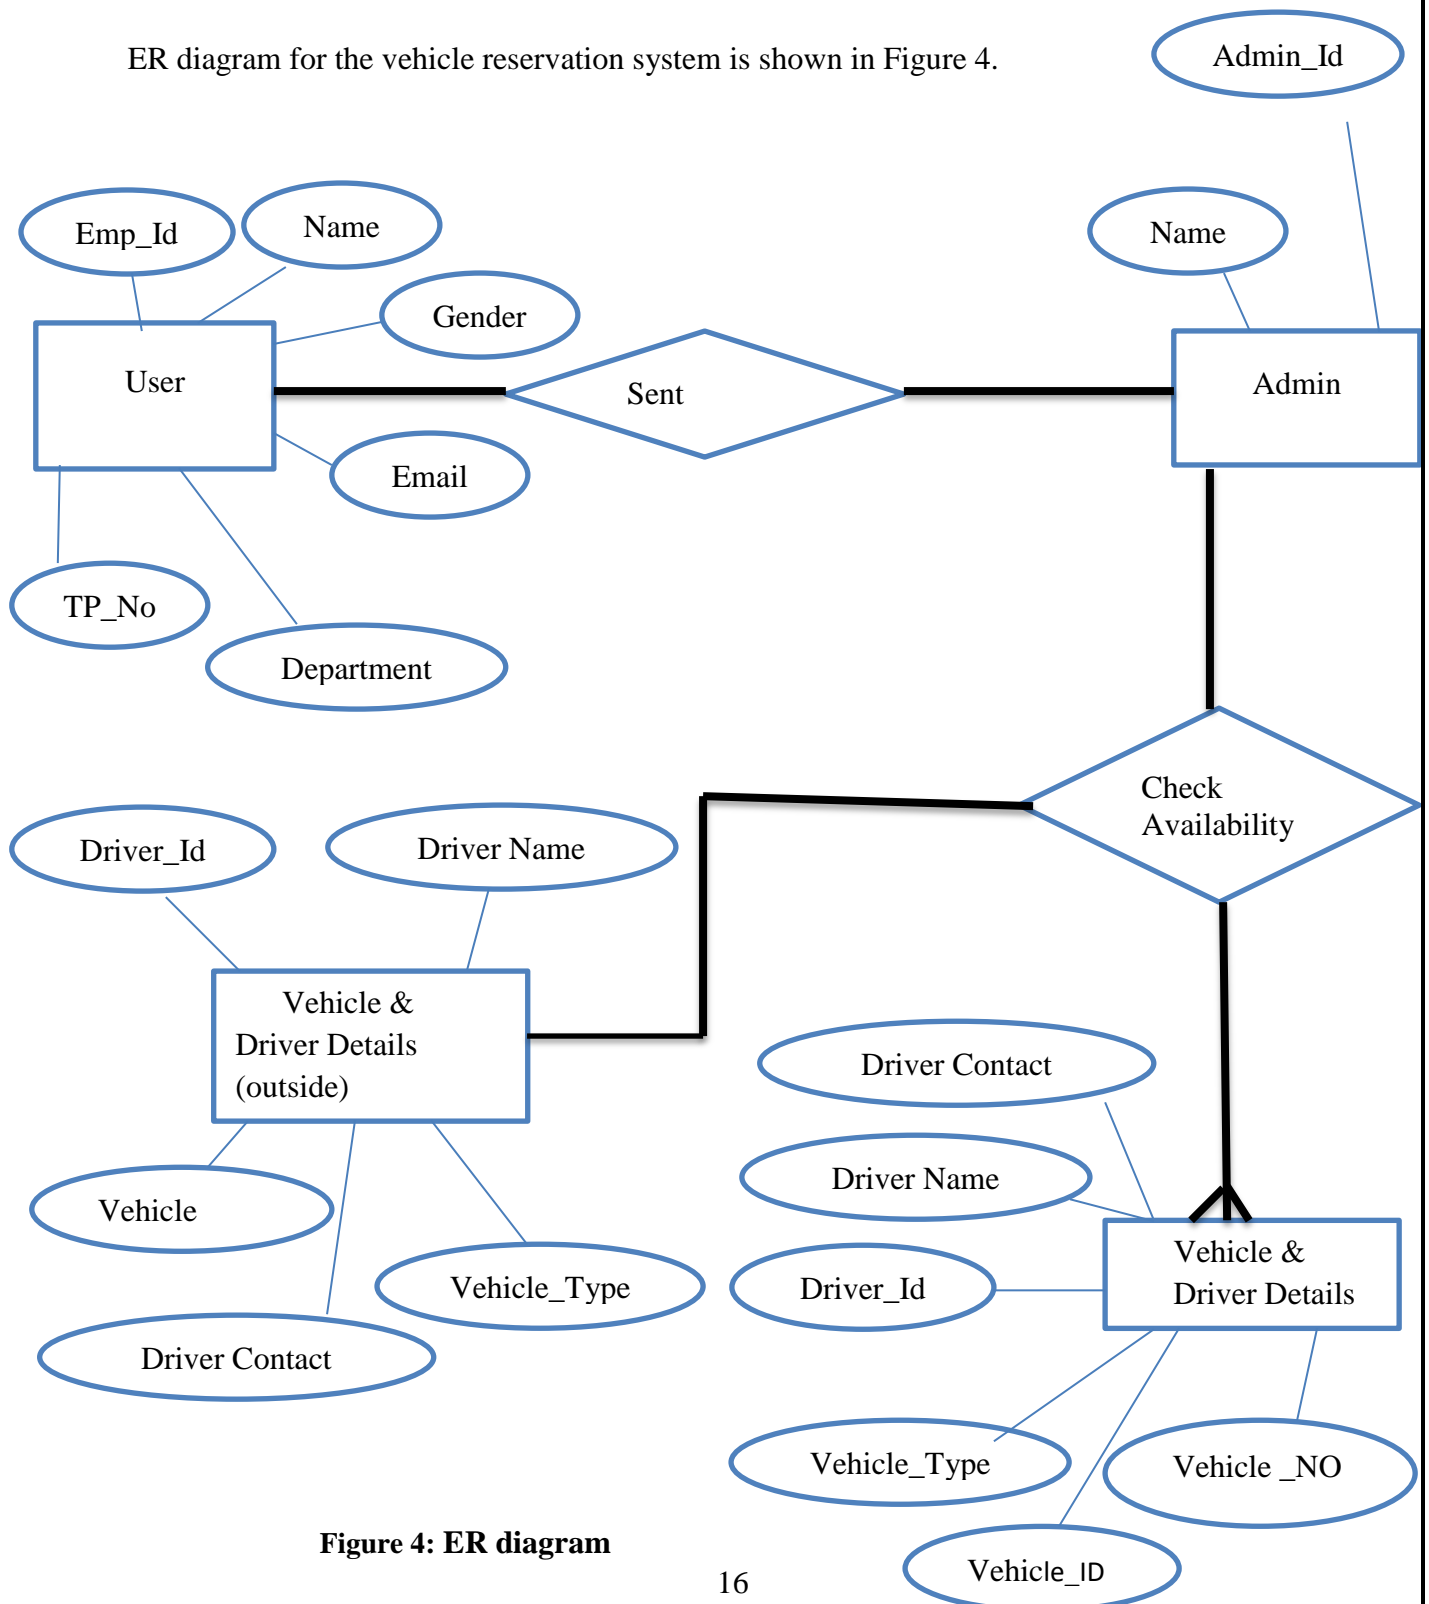

**Figure 3: Three tier- architecture**

### 3.2.2 Database Design

An Entity Relationship (ER) Diagram is a type of flowchart that illustrates how “entities” such as people, objects or concepts relate to each other within a system. ER Diagrams are most often used to design or debug relational databases in the fields of software engineering, business information systems, education and research.

ER diagram for the vehicle reservation system is shown in Figure 4.

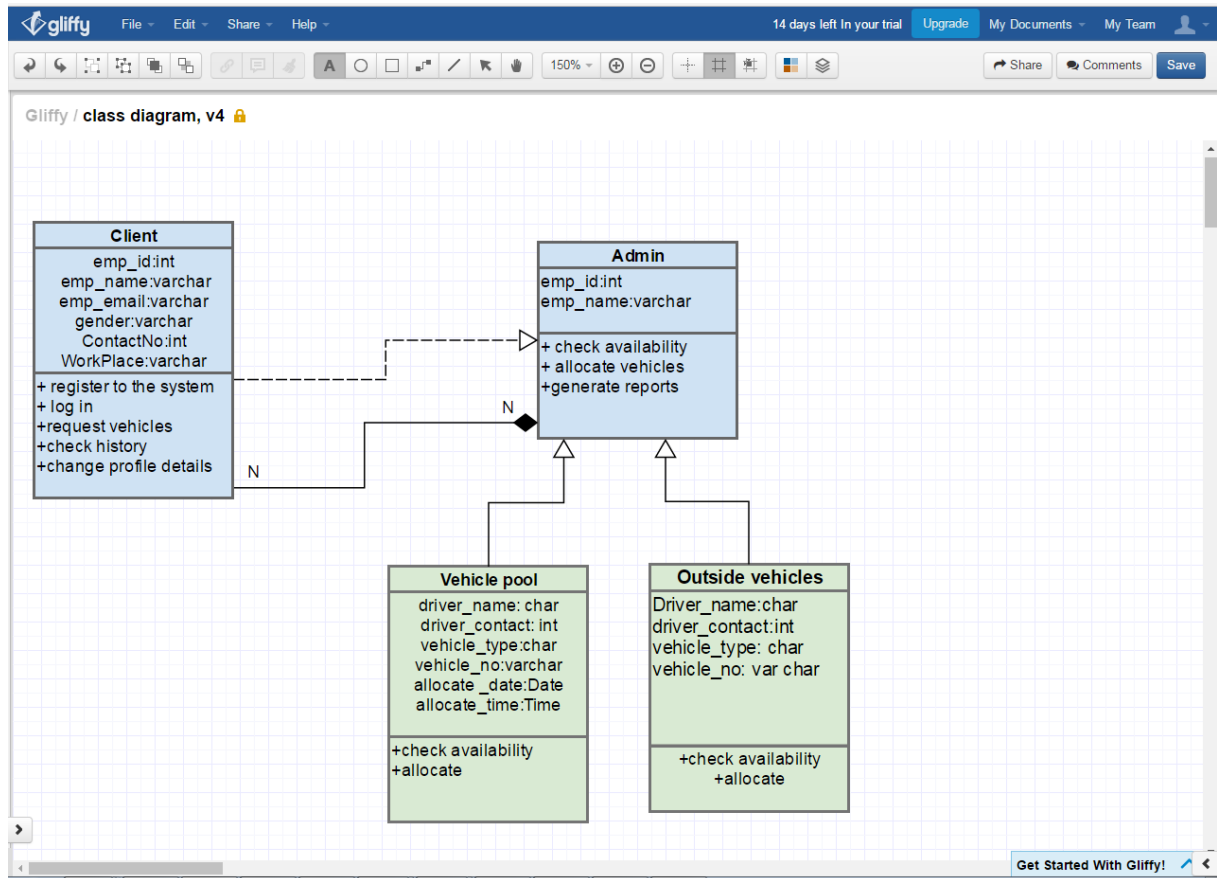

**Figure 4: ER diagram**

## **Entities**

- Client- Properties of the client.
- Admin- Properties of the Admin.
- Vehicle & Driver Details (inside pool)- Properties of the vehicle pool vehicles and drivers.
- Vehicle & Driver Details (outside) - Properties of the outside vehicles which are allocated if the vehicles in the pool are not sufficient and properties of drivers.

### 3.2.3 Class diagram

The class diagram of the system is shown in figure 5.

**Figure 5: Class Diagram**

Refer Appendix C for more diagrams.

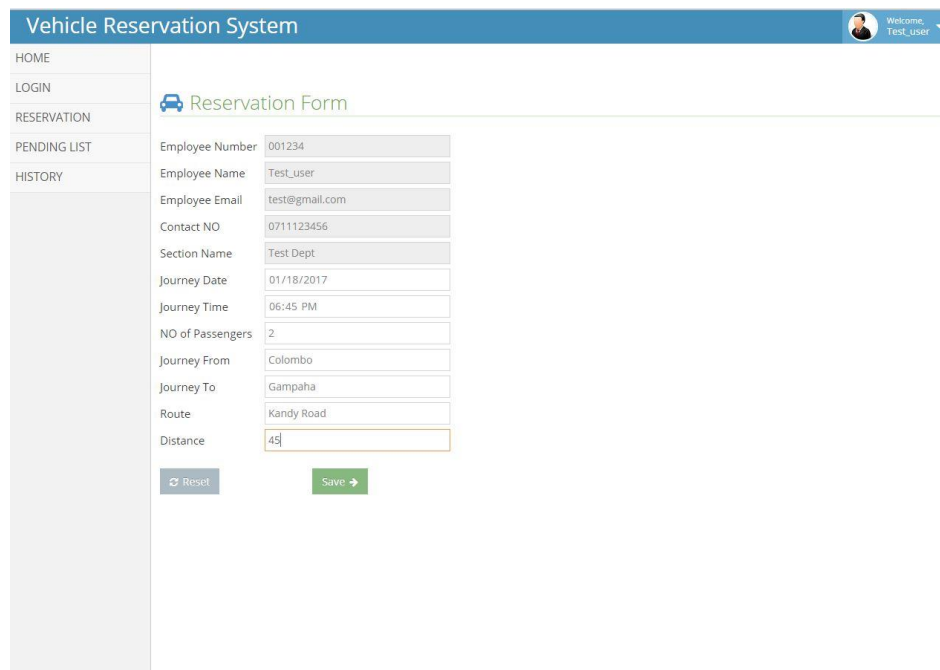

## **Chapter 4: Implementation**

### **4.1 Module Structure of the system**

#### **4.1.1 Interface Layer**

The interface layer of this system is built using HTML and CSS style sheets. The main menu is available in the left hand side is for easy navigation throughout the system. The menu structure displayed for each user will be based on the user role of the logged in user.

Some of the interface controls will also be enabled and disabled according to the user (shown in figure 6).

The screenshot displays the 'Vehicle Reservation System' interface. On the left is a vertical navigation menu with options: HOME, LOGIN, RESERVATION, PENDING LIST, and HISTORY. The 'RESERVATION' option is highlighted. The main content area is titled 'Reservation Form' and contains a form with the following fields: Employee Number (001234), Employee Name (Test\_user), Employee Email (test@gmail.com), Contact NO (0711123456), Section Name (Test Dept), Journey Date (01/18/2017), Journey Time (06:45 PM), NO of Passengers (2), Journey From (Colombo), Journey To (Gampaha), Route (Kandy Road), and Distance (45). At the bottom of the form are 'Reset' and 'Save' buttons. The top right of the interface shows a user profile with the text 'Welcome, Test\_user'.

**Figure 6: Interface Layer**

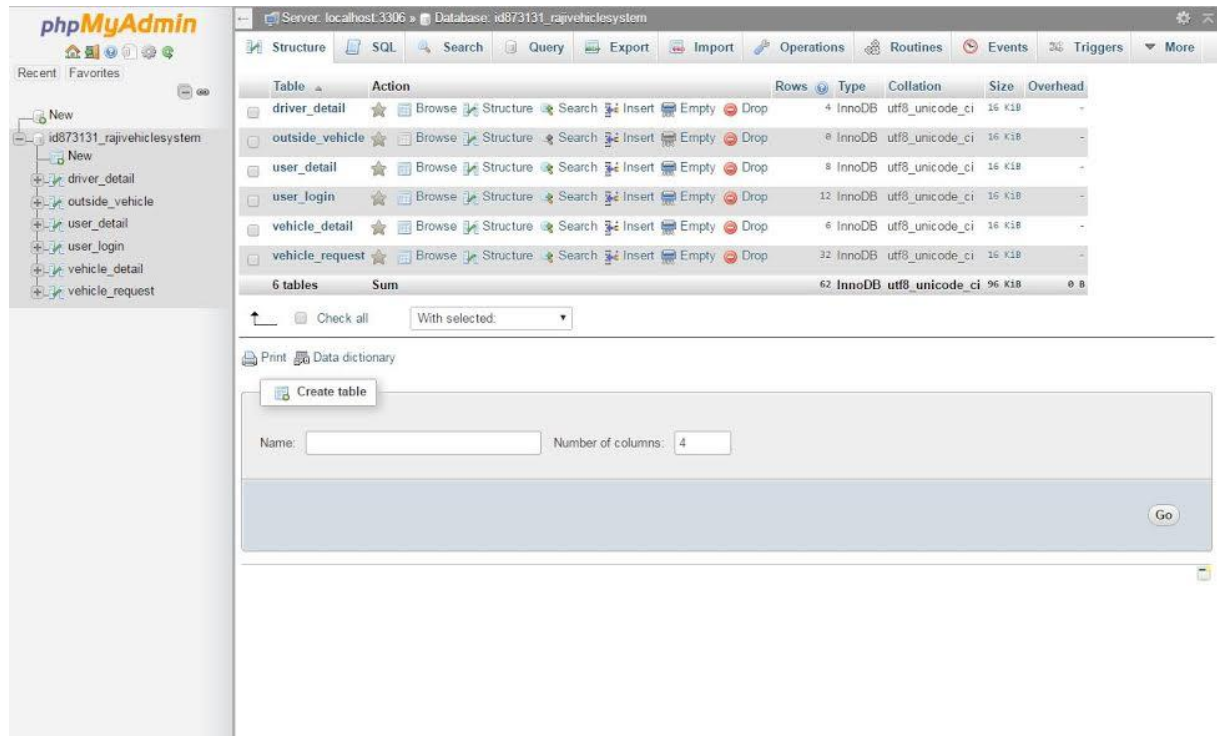

#### **4.1.2 Business Logic Layer**

The business logic layer is created using javascript.

### 4.1.3 Data Layer

The data layer of this system is created using SQL server. The database has been modeled using an entity relationship diagram. This ER diagram used to create the initial tables (shown in figure 7).

**Figure 7: Data Layer**

## **4.2 Technology Aspects**

The actual codlings of the system started just after the design of the system as mentioned in the previous chapter. Following Techniques used:

PC Platform: - Windows OS, Google chrome, Mozilla

Mobile platform: - Android studio.

Software framework: - Oracle Database

Languages used: - PHP, JAVA, HTML

These techniques are used because these are the well-known, easy to work with and also as the project title says "Open source", any company could get this and can be used with their knowledge and tools.

## **Chapter 5: User Evaluation and Testing**

### **5.1 User Evaluation**

#### **5.1.1 Sampling of Subjects**

Sampling is a Statistic and quantitative research methodology. Since it is generally impossible to study an entire population (every individual in a country, all college students, every geographic area, etc.), researchers typically rely on sampling to acquire a section of the population to perform an experiment or observational study. It is important that the group selected be representative of the population, and not biased in a systematic manner.

There are three main types of Sampling.

1. Simple Random Sampling: - Simple random sampling is the basic sampling technique where we select a group of subjects (a sample) for study from a larger group (a population).
2. Stratified Random Sampling: - A stratified sample is obtained by taking samples from each stratum or sub-group of a population.
3. Multistage Random Sampling: - A multistage random sample is constructed by taking a series of simple random samples in stages

According to this system, it is better to select Stratified Random sampling, because this system may be used in a transportation section on a Company, and that means this system can be handle with a normal IT knowledge person to all the employees in a company, because this is client based system. Selecting different people in different IT knowledge levels is a best way to check the system in various levels of knowledge.

This Sample contain System administrators, normal clients, Engineers; supervisor's e.t.c. A different set of clients will give the best result regarding the process of the system some They can checked the system, the algorithms, the flow, and the features.

### **5.1.2 Evaluation Scenarios**

A scenario is a description of a person's interaction with a system. This interaction is based on different scenarios with the system. These Scenarios describe the process of the system in various levels, in various user angles.

#### **User side Scenarios**

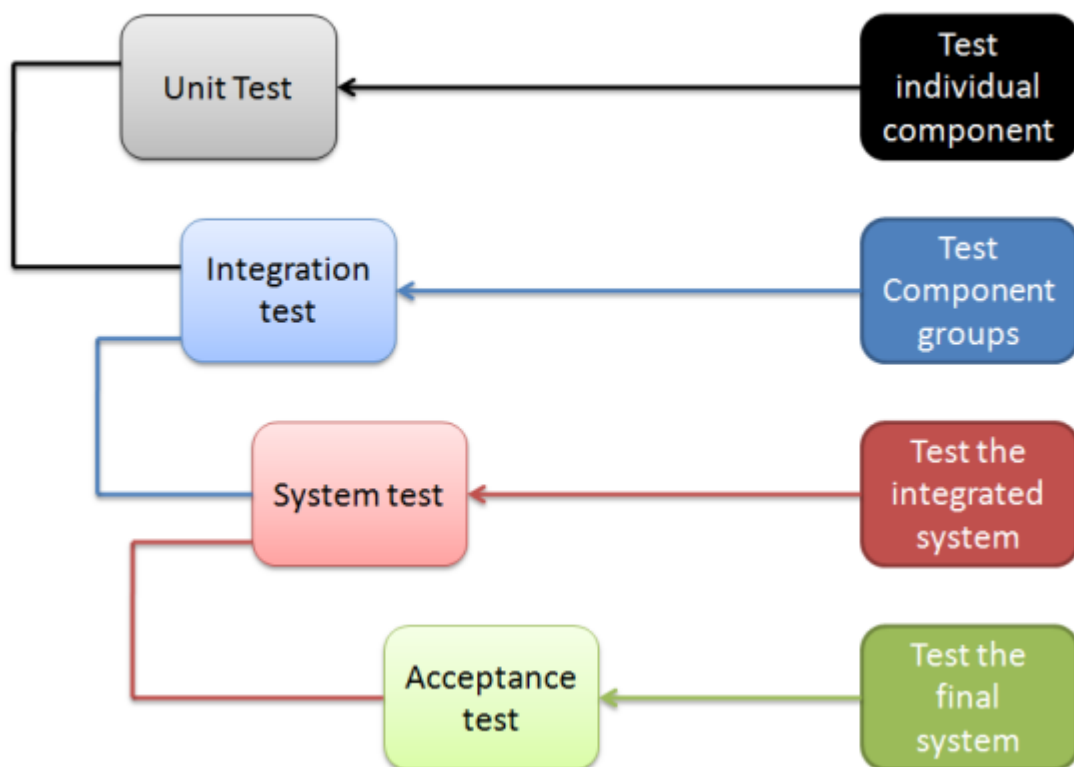

- Login- If the system login with no issues meets the relevant requirements and if the system pops up the needed error messages at the right time.
- Registration- If the user is new to the system, they have to register first. There is a Registration form, which should be filled by the user. Check when the relevant fields in the form pop up the correct messages and when submit it added to the database.
- Reservation – when user login they can see the reservation form to fill. Check when the relevant fields in the form pop up the correct messages and when submit it added to the database and send it to admin panel for reservation and an email received for the client about the reservation made.
- Profile- User can make changes to their profile.
- History- User can check their previous reservations.

#### **Admin Side Scenarios**

- Login- Admin can login with their username and password.
- Requests - Check whether the request count increased when a user made a request. Check whether the admin can check the request and assign the available drivers to the request.
- Vehicle Availability – admin can check the unassigned vehicles and can assign for the coming requests.
- Request Acceptance – Check when Admin accept the request an email and a sms sent to client.

## **5.2 Testing**

Software testing is a process of executing a program or application with the intent of finding the software bugs. Also, it can be defined as the process of validating and verifying that a software program or application meets the business and technical requirements that guided its design and development. Software testing can be as follows.(shown in figure 7)

**Figure 8: Software Testing**

### **5.2.1 Test Plan**

The test plan is implemented to plan how to test the system. This system should test unit by unit to check for any bugs or errors. Also with the result of the Unit Testing, then the Integration test can be implemented or can correct any errors found from Unit testing. Integration test allowed testing the units together. When the integration testing is successful, System test will be implemented to test the complete system. Finally the Acceptance testing is done by the internal and external volunteers to check whether the system gives the needed requirements to the client.

## 5.2.2 Unit Testing

According to the above scenarios following test cases are implemented and following results gained.

### *User side Scenarios*

- **Login**

Test cases(input data)	Expected result	Actual result
Click login button without entering username or password.	Error occurrence: "Pls enter a valid username or password" and user cannot log on to the system	Error occurrence: "Pls enter a valid username or password" and user cannot log on to the system
Click login button only entering the username.	Error occurrence: "Wrong username or password." and user cannot log on to the system.	Error occurrence: "Wrong username or password." and user cannot log on to the system.
Click login button only entering the password.	Error occurrence: "Wrong username or password." and user cannot log on to the system.	Error occurrence: "Wrong username or password." and user cannot log on to the system.
Click login button entering wrong username and password.	Error occurrence: "Wrong username or password." and user cannot log on to the system.	Error occurrence: "Wrong username or password." and user cannot log on to the system.
Click login button entering correct username and password.	Successfully login to the system.	Successfully login to the system.

**Table 2: Unit testing (User login)**

- **Registration**

<b>Test cases(input data)</b>	<b>Expected result</b>	<b>Actual result</b>
Click Register button without entering the details	Error occurrence: “Pls fill out the fields”. and user cannot register.	Error occurrence: “Pls fill out the fields”. and user cannot register.
Entered an email address with wrong validations. Ex: ruwan#.bbh@gmail com	Error occurrence and user cannot register.	Error occurrence and user cannot register.
Enter mismatch passwords to Password field and Confirmed password field	Error occurrence: “Passwords do not match” and user cannot register.	Error occurrence: “Passwords do not match” and user cannot register.
Enter all the details and Click Register Button.	Successfully registered.	Successfully registered.
Click on Reset button	Successfully reset the details and erase the fields.	Successfully reset the details and erase the fields.

**Table 3: Unit testing (User Registration)**

**Refer Appendix D for the rest of the test results.**

### 5.2.3 Integration Testing

System is tested with the database. The details entered to the system and details retrieved from the database to the system are tested top to bottom and bottom to top.

#### *User scenario*

Test cases	Expected result	Actual result
Click on Register button after filling the form.	Database updated with a new user each time.	Database updated with a new user each time.

### 5.2.4 System Testing

After successfully finishing the unit and integration testing the system is all together tested. This testing will be done by the developers their selves to check the system, if it meets the requirements. As the unit testing and integration testing was successful, the system testing also successful.

### 5.2.5 Acceptance Testing

Formal testing with respect to user needs, requirements, and business processes conducted to determine whether or not a system satisfies the acceptance criteria and to enable the user, customers or other authorized entity to determine whether or not to accept the system.

Acceptance testing is done through two stages:

- **Internal Acceptance Testing**-Done by the members of the Organization who developed the system, but not who involved in the development.
- **External Acceptance Testing**-Done by the outside users.

This system is given to some internal and external users for acceptance testing. Following Questionnaire is distributed and collected from them. (Test Results are stated Appendix D)

1) How likely is it that you would recommend this system to a friend or company?

- Not at all
- Recommend
- Highly Recommend

2) How satisfied are you with the reliability of this system?

- Extremely satisfied
- Very Satisfied
- Somewhat Satisfied
- Not so Satisfied
- Not at all satisfied

3) How satisfied are you with the security of this system?

- Extremely satisfied
- Very Satisfied
- Somewhat Satisfied
- Not so Satisfied
- Not at all satisfied

4) How satisfied are you with this system's ease of use?

- Extremely satisfied
- Very Satisfied
- Somewhat Satisfied
- Not so Satisfied
- Not at all satisfied

5) How satisfied are you with the look and feel of this system?

- Extremely satisfied
- Very Satisfied
- Somewhat Satisfied
- Not so Satisfied
- Not at all satisfied

6) Is it easy to learn to use this system?

- Yes
- No

7) Overall, how would you rate?

- Excellent
- Good
- Average
- Poor

8) Do you have any Thought on how to improve this system? State Below.

.....

.....

.....

## **Chapter 6: Conclusion and Future Work**

### **6.1 Conclusion**

The ultimate objective of this project is to provide cost effective, reliable, user friendly computerized system for a vehicle pool of a large company. When implementing the below aspects were achieved.

#### **6.1.1 Major Findings**

Major findings gathered after the above stated questionnaire is distributed and the results are added in appendix D.

#### **6.1.2 Lessons Learnt**

- Self-studied new html features.
- Self-studied new java features.
- Self-studied new php features.
- Studied how to plan the work of the system
- Time Management
- Learn how to change the system according to others comments

#### **6.1.3 Achievement of Objectives**

- Website for the Vehicle reservation client side built.
- Website for the Vehicle reservation Admin side built.
- Mobile app for the Client side built.
- Mobile app for the admin side built
- Client can login using Website and mobile app.
- Client can reserve a vehicle using Website and mobile app.
- Admin can check the newly created requests through Website and mobile.
- Admin can generate reports
- Admin can query the database.
- Admin get an alert one month prior to the licenses/insurance expiration date.
- Driver can mark their attendance through mobile
- Driver can end the journey through mobile.

#### **6.1.4 How to extend the work**

- GPS tracker can be added to track the vehicle.
- A way to track when an outside vehicle finished the journey.

#### **6.2 Future Work**

As a Future work I recommend that it is better to use a GPRS tracker to find out where the vehicle is in while on a ride. So that will be easier to the admin for their future reservations.

**System documentation**  
**Appendix A**

## **Installation of the web portal**

This Vehicle reservation system is currently running on a free webhosting site. A company can get the link of the website and they can post in their intranet as another button for vehicle reservation.

The link is as below.

System link: <https://abcvehicle.000webhostapp.com/>

## **Installation of the mobile app**

Any user can request the mobile app through the email of the vehicle reservation system. When they request we can send a link containing the download file to them.

The can run it and download it to their mobile easily.

## **User Documentation**

### **Appendix B**

## User

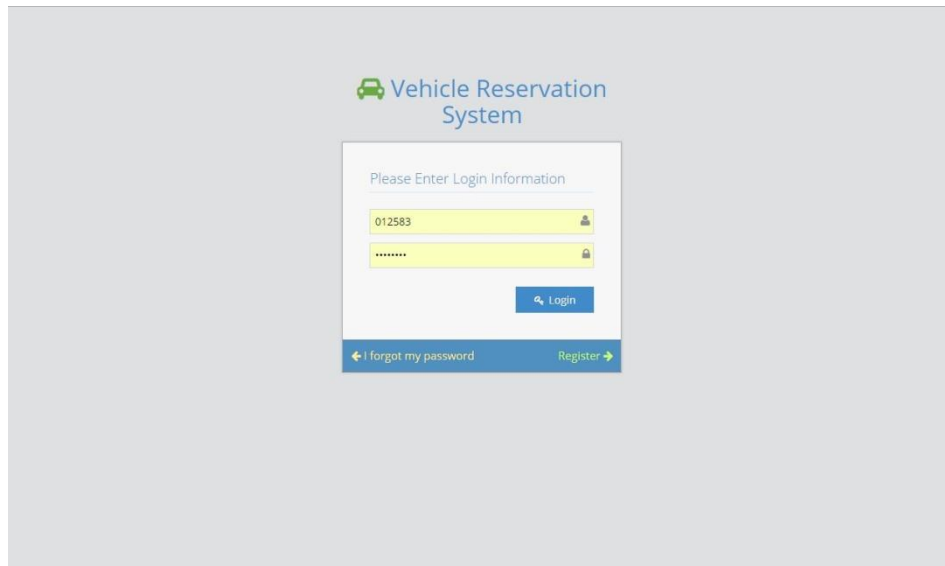

- 1) First of all user need to get registered to the system through mobile app or web portal.  
(Shown in figure 8.)

The screenshot shows a web portal titled "Vehicle Reservation System". On the left is a sidebar menu with "HOME", "LOGIN", and "REGISTER" (highlighted). The main content area is titled "New User Registration" and contains a form with the heading "Enter your details to begin:". The form fields are: Employee Number, Employee Name, Email, Contact Number, Work Place, Password, and Confirm password. Each field has a small icon to its right. Below the fields is a "Gender" section with radio buttons for "Male" and "Female". At the bottom of the form are two buttons: "Reset" and "Register". The footer of the page says "ABC Company © 2017".

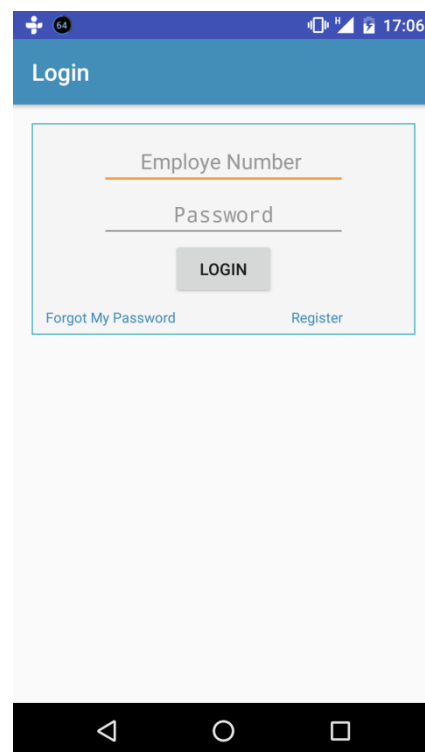

The screenshot shows a mobile app interface titled "User Registration". The form fields are: Employee Number, Name, Gender (with radio buttons for "Male" and "Female"), Employee Email, Contact Number, Work Place, Password, and Confirm Password. A "REGISTER" button is at the bottom of the form. The app's status bar at the top shows the time as 17:06. The bottom of the screen shows the Android navigation bar.

**Figure 9: User Registration Page**

- 2) After filling the above form user can get a username and password and can log in to the system. (Shown in figure 9.)

The screenshot shows a web-based login interface for the "Vehicle Reservation System". At the top, there is a green car icon followed by the system name. Below this is a white box with the heading "Please Enter Login Information". Inside the box, there are two yellow input fields: the first contains the text "012583" and has a user icon on the right; the second contains masked characters "\*\*\*\*\*" and has a lock icon on the right. Below the password field is a blue "Login" button with a magnifying glass icon. At the bottom of the white box, there are two links: "I forgot my password" with a left arrow and "Register" with a right arrow.

The screenshot shows a mobile application login screen. At the top is a blue header bar with the word "Login" in white. Below the header is a white box containing the login form. The form has two input fields: "Employee Number" and "Password", each with a horizontal line above it. Below these fields is a grey "LOGIN" button. At the bottom of the white box, there are two links: "Forgot My Password" and "Register". The entire screen is framed by a dark blue status bar at the top showing the time "17:06" and various icons, and a black Android navigation bar at the bottom.

**Figure 10: User Login page**

- 3) When logged in, reservation form will be appeared as the default page. User can fill the relevant fields and submit. (Shown in figure 10.)

The screenshot displays the 'Vehicle Reservation System' web application. On the left is a navigation menu with links: HOME, LOGIN, RESERVATION, PENDING LIST, and HISTORY. The main content area is titled 'Reservation Form' and contains a form with the following fields: Employee Number (001234), Employee Name (Test\_user), Employee Email (test@gmail.com), Contact NO (0711123456), Section Name (Test Dept), Journey Date (01/18/2017), Journey Time (06:45 PM), NO of Passengers (2), Journey From (Colombo), Journey To (Gampaha), Route (Kandy Road), and Distance (45). At the bottom of the form are 'Reset' and 'Save' buttons. A user profile dropdown in the top right corner shows 'Welcome, Test User'.

The screenshot shows the 'Reserve Vehicle' mobile application interface. The top status bar displays the time as 17:06. The app header is 'Reserve Vehicle'. Below the header, a summary box contains the following information: Prabodha (001234), prabodha7@gmail.com (0776053496), and OSS. Below this summary, there are input fields for Journey, Start Date, Start Time, Start Place, End Place, NO of Passangers, Route, and Distance. At the bottom of the form is a large 'REQUEST' button. The interface is shown on a mobile device with standard Android navigation icons at the bottom.

**Figure 11: User Reservation Form**

- 4) When the reservation submitted, user will get an email for the submission. The reservation appears in the pending list. User can check the status of the reservation. There are three categories of the status: Pending, Allocated and completed. (Shown in figure 11.)

The screenshot displays the 'Vehicle Reservation System' web application. On the left is a navigation menu with links: HOME, LOGIN, RESERVATION, PENDING LIST, and HISTORY. The main content area is titled 'Request Detail' and shows reservation information for a specific request. The data is organized into two columns of input fields.

Request Detail	
Request ID	VR2017011809
Request Date	2017-01-18 09:26:06
Journey Date	2017-01-18 18:45
Journey From	Colombo
Journey To	Gampaha
No Passenger	2
Route	Kandy Road
Distance	45
Status	PENDING
Vehicle No	
Driver Name	
Driver Contact No	

The screenshot shows the 'Reservation Details' page on a mobile application. The page lists various reservation details in a list format. At the bottom, there is a standard Android navigation bar.

Reservation Details	
VR Code	VR0221114635
Request Date	2017-02-21 06:16
Journey Date	2017-02-21 14:30

6) User can check their profile and can do changes to it.(shown in figure 13)

The screenshot shows a web application titled "Vehicle Reservation System". On the left is a sidebar menu with links: HOME, LOGIN, RESERVATION, PENDING LIST, and HISTORY. The main content area is titled "User Profile" and displays a form for user information. The form fields are as follows:

Employee Number	001234
Employee Name	Test_user
Employee Email	test@gmail.com
Contact NO	0711123456
Section Name	Test Dept
Gender	male
Change Password	
Old Password	Old password
New Password	new password
Confirm Password	Confirm password

At the bottom of the form are two buttons: "Reset" and "Save".

The screenshot shows a mobile application interface titled "Change Password". It displays a form for user information and password change. The form fields are as follows:

Employee Number	001234
Name	Prabodha
Gender	male
Employee Email	prabodha7@gmail.cor
Contact Number	0776053496
Work Place	OSS
Old Password	
New Password	
Conferm Password	

At the bottom of the form is a button labeled "CHANGE PASSWORD".

**Figure 14: User Profile page**

## Administrator

- 1) The admin can register to the system with the same registration form.(Shown in figure 14.)

The screenshot displays the 'New User Registration' page of a 'Vehicle Reservation System'. The page features a blue header with the system name and a 'Welcome' message with a user profile icon. A left sidebar contains navigation links: 'HOME', 'LOGIN', and 'REGISTER'. The main content area is titled 'New User Registration' and includes a form with the following fields: 'Employee Number', 'Employee Name', 'Email', 'Contact Number', 'Work Place', 'Password', and 'Confirm password'. Each field has a corresponding icon (person, envelope, phone, house, and lock). Below the fields are radio buttons for 'Gender' (Male and Female). At the bottom of the form are 'Reset' and 'Register' buttons. The footer of the page reads 'ABC Company © 2017'.

## **Design documentation**

### Appendix C

## Process Flow Diagram

A process flow diagram (PFD) is a diagram commonly used in chemical and process engineering to indicate the general flow of plant processes and equipment. The PFD displays the relationship between major equipment of a plant facility and does not show minor details such as piping details and designations.

### (Reservation/client side/Through Website)

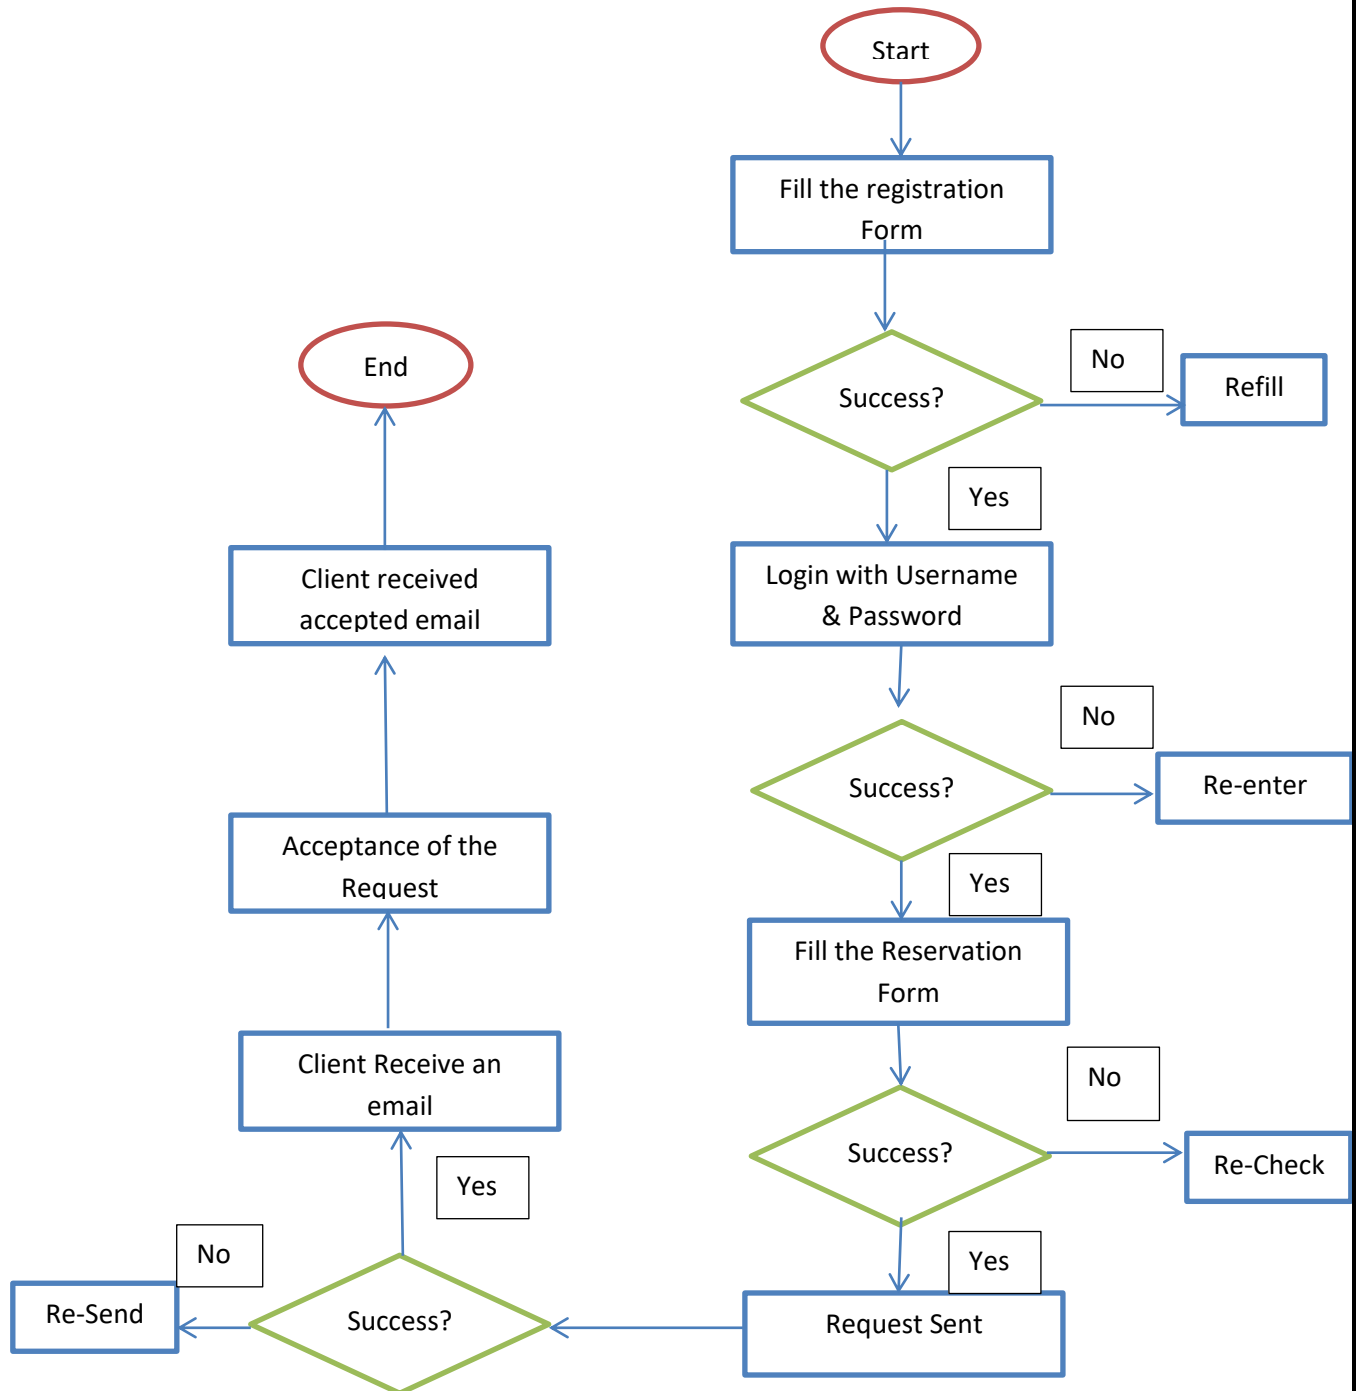

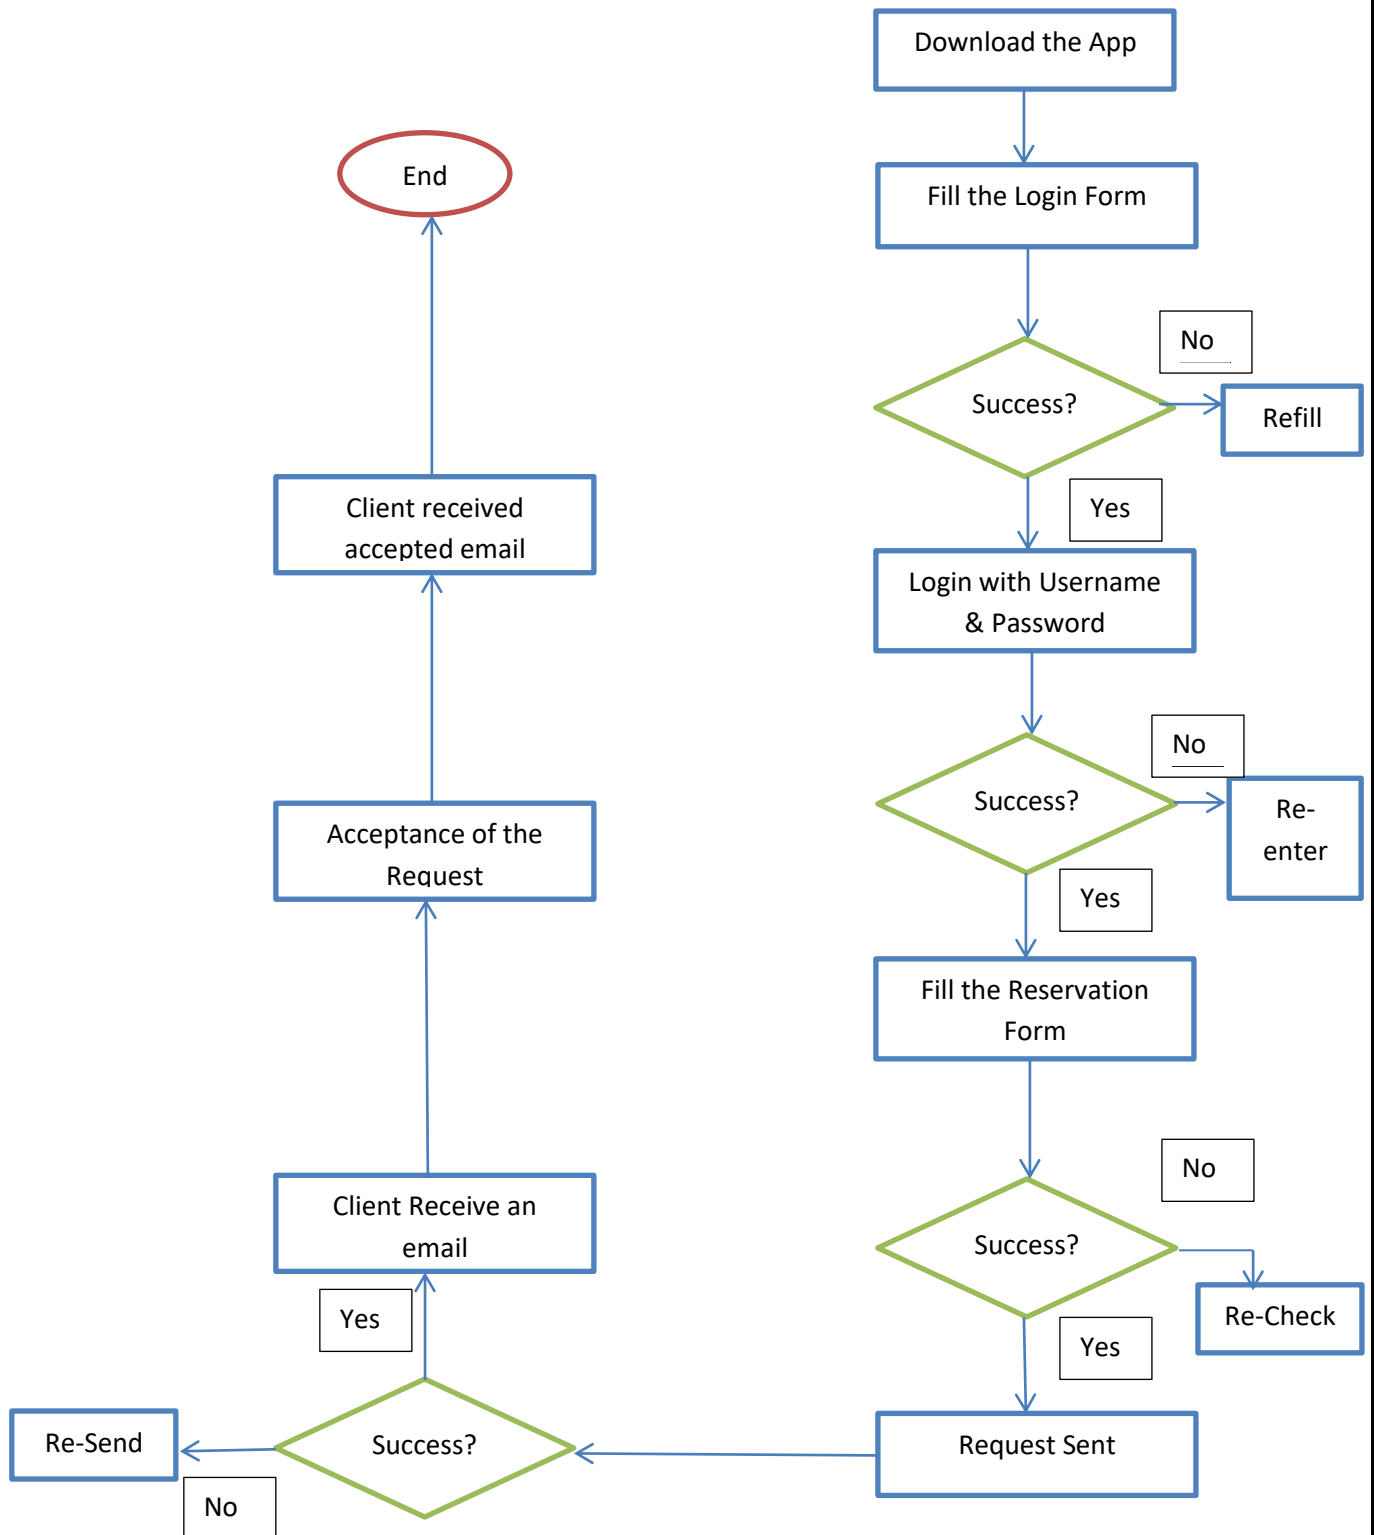

Figure 24: Client Reservation through website process flow digaram

Figure 24 shows the client side reservation through website. Client fills the registration form first to get a login. Then he/she can log on to the system using the username and password. When the log in is success it auto redirect to the reservation form. User then fills the reservation form and sent it to admin for allocation. User gets an email if the request sent successfully. An also User get an email with the allocation details when the admin allocate a vehicle.

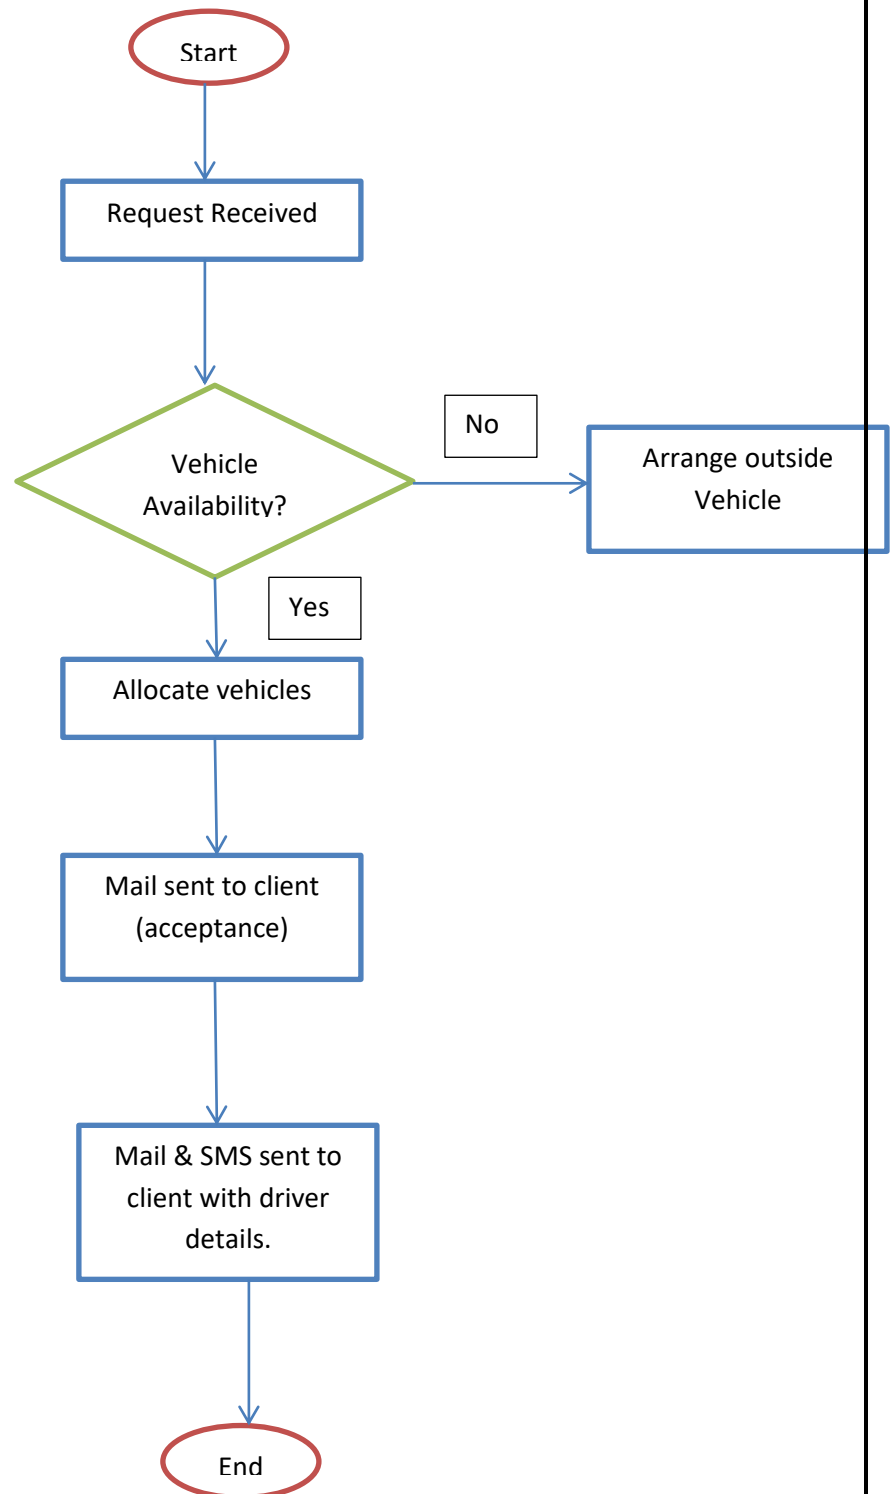

(Reservation/client side/Through mobile app)

**Figure 25: Client Reservation through mobile app process flow digaram**

Figure 25 shows the same procedure stated above in figure 24 but with the mobile app.

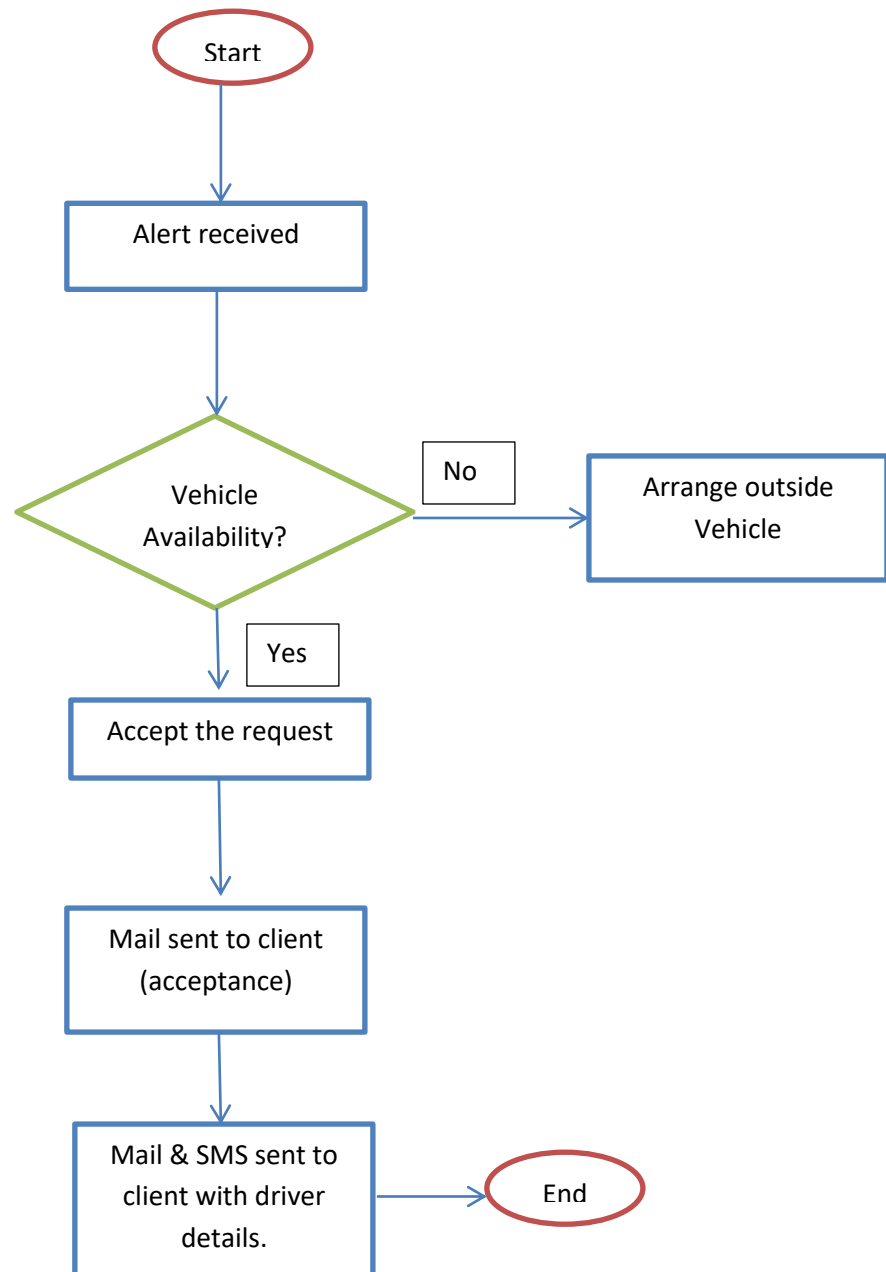

**(Reservation acceptance/Admin side/Through PC)**

**Figure 26: Admin side reservation acceptance through website**

Figure 26 shows the admin procedure of the system. When a reservation made, admin can check that reservation and can check availability of the vehicles and then if a vehicle is available he can allocate it and the allocation is successful. User received an email with the allocation details. If a vehicle is not available in the pool, admin can call a outside vehicle company and reserve a vehicle and admin can add those details to the system and allocate the vehicle.

**(Reservation acceptance/Admin side/Through Mobile App)**

**Figure 27: Admin side reservation acceptance through mobile app**

Figure 27 shows the same procedure stated above in figure 27 but with the mobile app.

## User interfaces

### ❖ Client Side web portal

- *The first page appears for the client*

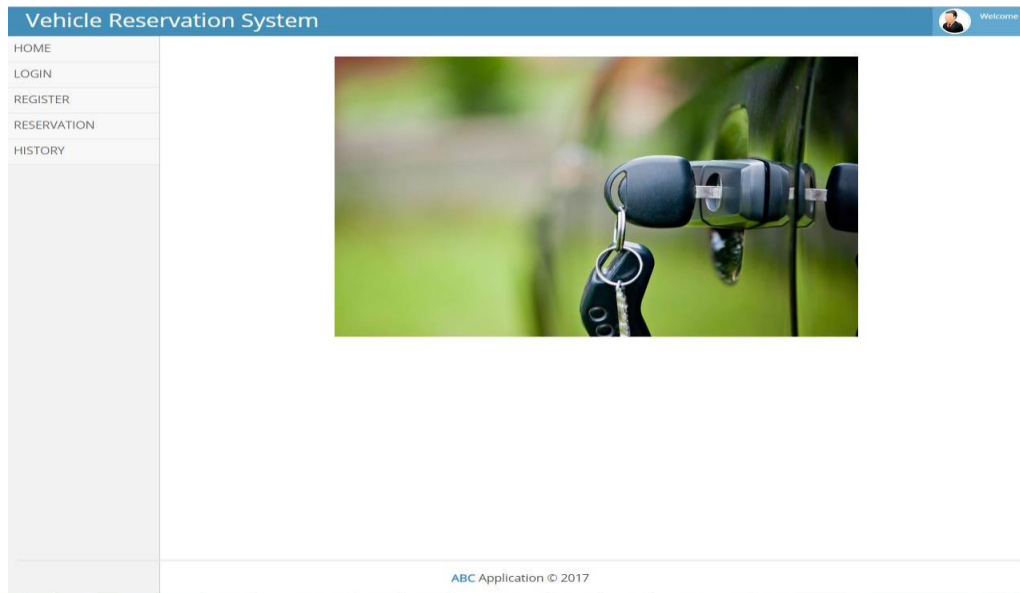

Figure 28: Main interface page

- *Registration page*

The screenshot displays the 'New User Registration' page within the 'Vehicle Reservation System'. The header and sidebar are identical to the main interface. The main content area is titled 'New User Registration' and includes the instruction 'Enter your details to begin:'. Below this, there is a form with the following fields: Employee Number, Employee Name, Email, Contact Number, Work Place, Password, and Confirm password. Each field has a corresponding icon (ID card, person, envelope, phone, building, and lock). At the bottom of the form, there is a 'Gender' section with radio buttons for 'Male' and 'Female'. Two buttons are located at the bottom of the form: a grey 'Reset' button and a green 'Register' button with a right-pointing arrow. The footer bar at the bottom of the page shows 'ABC Company © 2017'.

## ❖ Client Side mobile app

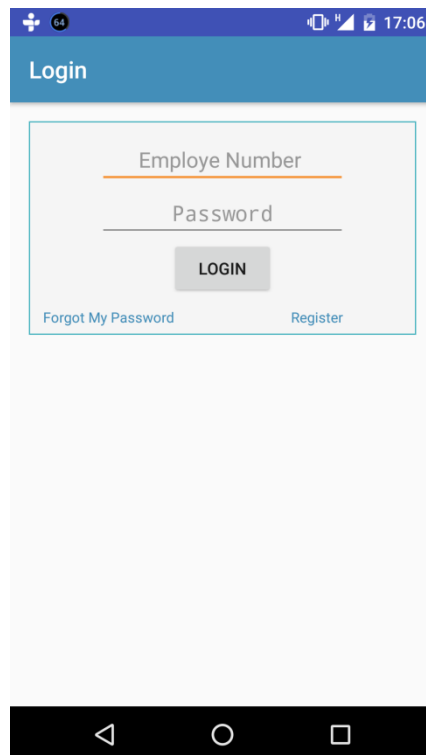

- *Registration page*

The screenshot shows the 'User Registration' page of a mobile application. The page has a blue header with the title 'User Registration' and a menu icon. Below the header is a light gray form box containing several input fields: 'Employee Number', 'Name', 'Gender' (with radio buttons for 'Male' and 'Female'), 'Employee Email', 'Contact Number', 'Work Place', 'Password', and 'Confirm Password'. A 'REGISTER' button is located at the bottom of the form. The page is displayed on a mobile device screen with a status bar at the top showing the time as 17:06 and various icons.

**Figure 40: Registration page (mobile app)**

- *Login page*

The screenshot shows the 'Login' page of a mobile application. The page has a blue header with the title 'Login'. Below the header is a light gray form box containing two input fields: 'Employee Number' and 'Password'. A 'LOGIN' button is located below the password field. At the bottom of the form box, there are two links: 'Forgot My Password' and 'Register'. The page is displayed on a mobile device screen with a status bar at the top showing the time as 17:06 and various icons.

## Acceptance Testing

The result from the Questionnaire is evaluated. Following are sample Questionnaire result I got.

### Designation: - IT & network officer

1) How likely is it that you would recommend this system to a friend or company?

- Not at all ☐
- Recommend ☐
- Highly Recommend ☒

2) How satisfied are you with the reliability of this system?

- Extremely satisfied ☐
- Very Satisfied ☒
- Somewhat Satisfied ☐
- Not so Satisfied ☐
- Not at all satisfied ☐

3) How satisfied are you with the security of this system?

- Extremely satisfied ☐
- Very Satisfied ☒
- Somewhat Satisfied ☐
- Not so Satisfied ☐
- Not at all satisfied ☐

4) How satisfied are you with this system's ease of use?

- Extremely satisfied ☒
- Very Satisfied ☐
- Somewhat Satisfied ☐
- Not so Satisfied ☐
- Not at all satisfied ☐

5) How satisfied are you with the look and feel of this system?

- Extremely satisfied ☐
- Very Satisfied ☒
- Somewhat Satisfied ☐
- Not so Satisfied ☐
- Not at all satisfied ☐

6) Is it easy to learn to use this system?

- Yes ☒
- No ☐

7) Overall, how would you rate?

- Excellent ☒
- Good ☐
- Average ☐
- Poor ☐

8) Do you have any Thought on how to improve this system? State Below.

.....  
.....  
.....

**Designation: - Engineer**

9) How likely is it that you would recommend this system to a friend or company?

- Not at all ☒
- Recommend ☐
- Highly Recommend ☒

10) How satisfied are you with the reliability of this system?

- Extremely satisfied ☐
- Very Satisfied ☒
- Somewhat Satisfied ☐
- Not so Satisfied ☐
- Not at all satisfied ☐

11) How satisfied are you with the security of this system?

- Extremely satisfied ☐
- Very Satisfied ☒
- Somewhat Satisfied ☐
- Not so Satisfied ☐
- Not at all satisfied ☐

12) How satisfied are you with this system's ease of use?

- Extremely satisfied ☐
- Very Satisfied ☒
- Somewhat Satisfied ☐
- Not so Satisfied ☐
- Not at all satisfied ☐

13) How satisfied are you with the look and feel of this system?

- Extremely satisfied ☒
- Very Satisfied ☐
- Somewhat Satisfied ☐
- Not so Satisfied ☐
- Not at all satisfied ☐

14) Is it easy to learn to use this system?

- Yes ☒
- No ☐

15) Overall, how would you rate?

- Excellent ☒
- Good ☐
- Average ☐
- Poor ☐

16) Do you have any Thought on how to improve this system? State Below.

It is very much user friendly if it is possible to merge Reservation, Pending list and History to a single screen.

**Designation: - Customer care officer**

17) How likely is it that you would recommend this system to a friend or company?

- Not at all ☐
- Recommend ☐
- Highly Recommend ☒

18) How satisfied are you with the reliability of this system?

- Extremely satisfied ☒
- Very Satisfied ☐
- Somewhat Satisfied ☐
- Not so Satisfied ☐
- Not at all satisfied ☐

19) How satisfied are you with the security of this system?

- Extremely satisfied ☒
- Very Satisfied ☐
- Somewhat Satisfied ☐
- Not so Satisfied ☐
- Not at all satisfied ☐

20) How satisfied are you with this system's ease of use?

- Extremely satisfied ☒
- Very Satisfied ☐
- Somewhat Satisfied ☐
- Not so Satisfied ☐
- Not at all satisfied ☐

21) How satisfied are you with the look and feel of this system?

- Extremely satisfied ☒
- Very Satisfied ☐
- Somewhat Satisfied ☐
- Not so Satisfied ☐
- Not at all satisfied ☐

22) Is it easy to learn to use this system?

- Yes ☒
- No ☐

23) Overall, how would you rate?

- Excellent ☒
- Good ☐
- Average ☐
- Poor ☐

24) Do you have any Thought on how to improve this system? State Below.

The overall results of the Acceptance Test are as follow.
